IC Insertion Tool

RS Stock number 424-658

Description:

This tool is designed to straighten and/or dress leads of 0.3" and 0.6" pitch DIL components to the correct spacing ready for insertion direct into the printed Circuit board or socket. Forming is achieved by passing the component along the locating rail and through the pre-set roller bearings. These rollers are adjustable to allow for different lead thicknesses.

Specification:

DLS 360 DIP Lead Reformer in use reforming .600 pin DIP. When inverted (turned upside down so narrower forming track is on top) it can be used in the same way to reform .300 pin DIP's.
