

# Biax™ S and S/E

## Compact Fluorescent Lamps Non-Integrated 5W, 7W, 9W and 11W

### Product information

Biax™ S compact fluorescent lamps can provide savings of up to 73% in energy costs compared to incandescent lamps. Available in 5, 7, 9 and 11 watt ratings, low wattage Biax™ S lamps are ideal for new installations or to replace existing incandescent lamps. These lamps are available in 2700, 3000, 3500, 4000, 5000 and 6500K colour temperatures. The Biax™ S lamps have built-in internal starters. They have a rated average life of 10,000 hours, which results in fewer lamp changes and a reduction in maintenance costs over the life of an installation. The Biax™ S/E lamps are available in 5, 7, 9 and 11 watt ratings. However, the Biax™ S/E lamps have 4-pin caps without built-in capacitors and starters, they are therefore suitable for operation with electronic control gear and can be used for dimming and emergency lighting applications. Biax™ S/E lamps have the same energy saving benefits and high quality colour rendering as the Biax™ S range.

The use of separate electronic ballasts makes them suitable for almost every kind of energy supply: high and low voltages, accumulators, batteries, solar cells and systems that can be dimmed.

When the new fluorescent lamp is installed into dimming system, it is advised to operate lamps for period of 100 hours at full light output.

### Features

- Flat and compact
- High luminous efficacy
- Up to 73% energy-saving compared to incandescent lamps
- 10 times the lamp life of incandescent lamps
- Pleasant light, excellent colour rendering.

### Application areas

- Wall & ceiling luminaires
- In hotels, motels, office buildings, apartments
- Building, public areas
- Ideal for task light applications also
- Emergency lighting
- Enclosed outdoor fixtures

### Compliance with IEC standards

Biax™ S & S/E lamps comply with the relevant clauses of all applicable safety and performance specifications including IEC 61199, IEC 60901.

11W	222	27	215

## Lamp life

Rated average life for Biax™ S & S/E lamps is 10,000 hours (switching cycle: 3 Hrs: 165Mins ON / 15Mins OFF).

## Lumen maintenance

Lumen maintenance curve presented for Biax™ S & S/E lamps is based on lumen readings in a photometric sphere under laboratory conditions, in cap up position. In actual use, lumen output is a function of burning hours and lamp operating watts throughout life.

**Survival rate and lumen maintenance**

5W

**Survival rate and lumen maintenance**

7W, 9W and 11W

	Survival rate 3 hours	Lumen maintenance
100	1.00	1.00
2,000	1.00	0.89
4,000	0.98	0.83
6,000	0.92	0.79
8,000	0.78	0.75

	Survival rate 3 hours	Lumen maintenance
100	1.00	1.00
2,000	1.00	0.93
4,000	0.98	0.90
6,000	0.92	0.88
8,000	0.78	0.86

## Effect of frequent switching

Lamps survive min. 20,000 switching cycles with appropriate electronic gear or external starter.

## Effects of supply voltage variations on lamp performance

Biax™ S & S/E lamps are suitable for supplies in the range 200V to 240V, 50Hz for appropriately rated series choke (reactor) ballasts. Supplies outside this range require a transformer (conventional, high reactance or CWA) to ensure correct lamp operation. Lamps start and operate at 10% below the rated supply voltage when the correct control gear is used. However, in order to maximise lamp survival, lumen maintenance and colour uniformity, the supply voltage and ballast design voltage should be within  $\pm 3\%$ . Supply variations of  $\pm 5\%$  are permissible for short periods only. This may be achieved by measuring mean supply voltage at the installation and selecting ballasts with appropriate settings.

## Luminous intensity distribution

The luminous intensity distribution curve shows the horizontal light intensity of Biax™ S & S/E lamps.

### Radial luminous intensity distribution

## Effects of temperature changes

When installed in a luminaire, the temperature of the air surrounding the lamp cap changes and this can affect the light output of the lamp. The effects of changes in ambient temperature for a typical lamp are in the graph below.

Lumen output vs. ambient air temperature
