Front ventilation grille for rack,2U

RS Stock 584-249

Description

- Vent panels

Where rack ventilation is required, the extruded panels are available from stock fitted with a fine mesh steel grille (2mm square holes at 3mm pitch). As a more robust alternative, particularly suitable for locations near floor level. Vent panels are normally available finished in dawn grey stove enamel from stock.

- Vent Tray

Where rising warm air from rack- mounted equipment must be diverted to a vent to prevent it affecting units higher in the rack, the mesh vent panel is available fitted with a sloping tray. Vent trays are normally available finished in dawn grey stove enamel from stock.
