

Telephone- and leased line modem for industrial applications

TD-36

Modem for industrial PSTN- and leased line applications

The TD-36 is an analogue V.34 PSTN modem as well as an industrial 2-wire leased line modem. V.34 provides data rates up to 33.6 kbit/s on the communication line. Several features make it ideal for use in industrial applications: Password protection, dial-back security and caller ID answering are only some of its features. The RS-232 interface is accessible via either 9 pin D-sub or screw terminals. A Windows modem driver is supplied with the unit for PC based applications. The TD-36 is the ideal choice for industrial dial-up and 2-wire leased line applications.

Configuration and diagnostics

The TD-36 is configurable via its serial interface in several ways, either via standard terminal emulation software using AT-Hayes commands or Westermo's own modem configuration, TD-Tool. Additionally the TD-36 can be configured via its onboard DIP-switches. TD-Tool is a Windows based configuration GUI that simplifies setting up the modems, connection statistics can be viewed and configurations saved for further use. To assist in fault finding and reconfiguration of unmanned stations, the modem can be configured remotely via a PSTN connection.

Harsh industrial environment

TD-36 is designed to function reliably within industrial environments and in areas of high-level interference. The modem is equipped with transient protection on the line side and a "watchdog" that monitors and automatically resets the modem in the event of a fault.

The TD-36 is designed to be mounted easily on to a 35 mm DIN-rail, it has screw terminal connections, an extended temperature range from -25°C to +70°C and is tri galvanically isolated. The power supply operates over a wide input range, and can be delivered with different power supply options.

Approvals

The construction of the units has gone through extensive testing and approvals both by Westermo and approved test houses. The TD-36 is approved for use in Europe, as well as in USA and Canada.

RS-232	
Electrical specification	EIA/TIA-232
Data rate	1200 bit/s – 115.2 kbit/s
Data format	7 or 8 data bits, Odd, even or none parity, 1 or 2 stop bits, 9-12 bit words
Protocol	Transparent
Retiming	Yes
Transmission range	Cable length ≤ 15 m
Isolation to	Power port 3 kVrms 50 Hz 1 min PSTN Line 2 kVrms 50 Hz 1 min Leased Line 2 kVrms 50 Hz 1 min
Connection	9-pin D-sub female (DCE) and Detachable screw terminal (DCE)
Connector size	Detachable screw terminal 0.2 – 2.5 mm ² (AWG 24 – 12)
Shielded cable	Not required*

* Railway installation close to the rails.

For a cable located within 3 m and connected to this port, the use of shielded cable is recommended, this is to minimise the risk of interference. The cable shield should be properly connected (360°) to an earthing point within 1 m of this port. This earthing point should have a low impedance connection to the conductive enclosure of the apparatus cabinet, or similar, where the unit is built-in. This conductive enclosure should be connected to the earthing system of an installation and may be directly connected to the protective earth.
