Silicon Rubber Heater, 10"X2", 100W

Silicon Rubber Heaters provide outstanding performance in applications up to 250°C under a variety of operating conditions. Properly applied silicone rubber heater life routinely exceeds 10 years. Silicone rubber has a high dielectric strength and is flame retardant and non-toxic. Design versatility permits special heat profiles allowing zones of higher or lower heat concentration as needed. Their flexible construction makes them very easy to install on a variety of surfaces. Silicone Rubber Heaters can be mounted to flat or curved surfaces. They are not affected by vibration, flexing or repeated mechanical shock

Technical Specifications:-

- Width : 2"
- Length : 10"
- Voltage : 120V AC
- Wattage : 100W Wattage
- Lead wires : 10 inch long
- Lead wire insulation : Teflon
