- Protective outer shell shields discs from extreme temperatures (up to 200°C or -50°C)
- Scratch-proof pockets cradle discs
- Spill resistant design
- Multiple color options
- Lifetime Warranty
- Strong retailer margins
- Provides much needed innovation for category

Mobile Entertainment Evolves

The automobile has shifted from simple transportation to a mobile entertainment unit. CD and DVD players are now present in the front and back seat. Independent entertainment options are available for all members of the family.

The Discs Pile Up...

Consumers are handling a massive amount of media in the car. DVDs, CDs, movies for the kids, and burned discs are ever-present within the modern vehicle. As consumers bring increasingly valuable media like DVDs into their automobile, they need a device to store and protect their discs from scratches, heat and the occasional spill.

The Solution: Discgear

Discgear is the evolution of media storage. The 20S has a patented dual-sided design to provide consumers with twice the storage in a small package. The protective shell shields discs from extreme temperatures while the scratch-proof pockets and spill resistant design guard the discs from any mishaps. Modern storage for today's car.
