

The image displays several E-A-R Flex hearing protectors against a white background. There are three main units: a purple one in the upper left, a yellow one in the upper right, and a larger purple one in the lower half. Each unit consists of a flexible, braided tube that loops around the head and connects to a yellow, cone-shaped earpiece. The purple tubes have yellow earpieces, while the yellow tube has a red and yellow earpiece. The tubes are shown in various curved and looped positions to demonstrate their flexibility.

E·A·R Flex™

Semi-Aural Hearing Protectors
The Flexible Alternative

FlexiCap™

SNR 23

FlexiCap offer the flexibility and compatibility of the new Flex band and the world's most popular semi-aural hearing protector. FlexiCap feature the innovative, patented hinged headband allowing for a variety of wearing positions without compromising other forms of personal protective equipment. The patented pod features the soft, smooth polyurethane cap design of our popular semi-aural E-A-RCaps.

Features & Benefits Include:

- Hinged headband
- Easy Insertion
- Washable and replaceable pods
- Comfortable
- Excellent protection
- Replacement pods available
- Suitable for use with other PPE
- Tested to EN352-2

ReFlex™ SNR 27

ReFlex is a versatile, lightweight and comfortable alternative for ear muff wearers. Not only do they provide equal or higher protection than many ear muffs, they also feature pivoting headbands for multi positional wear. The open design helps keep the wearer cool in hot environments. The innovative patented headband allows the user tremendous flexibility in position, permitting easier use with other equipment.

Features & Benefits Include:

- Hinged headband
- Tapered E-A-RForm™ foam pods
- Easy Insertion
- Washable and replaceable pods
- Comfortable
- Excellent protection
- Tested to EN352-2
