SMARTER BUILDING

Compact Home Catalog

Protection and comfort systems for your home

ABB is the world-leading provider of smarter home, smarter building and intelligent community solutions with a pragmatic and innovative spirit as well as total contribution to social and environmental responsibility and sustainability. Through innovative protection, metering and command devices as well as distribution enclosures, we make greater energy efficiency and increased security easier than ever.

Safety at home with ABB

Thanks to its expertise, ABB offers best-in-class solutions for your home. The comprehensive portfolio of miniature circuit breakers, residual current devices, surge protective devices, as well as control, signaling, measuring and smart accessories help you create buildings of the future, today.

By definition home is where you will find maximum comfort and protection because when we feel safe, we can relax. Therefore comfort is closely linked to protection, with regard to personal safety, energy savings, environmental sustainability and economic advantages.

Nowadays, new buildings are based on constantly developing building standards and regulations: state-of-the-art materials and products are designed, installed and operated to ensure once unimaginable levels of comfort, security, design and energy efficiency. Within this rapid evolution, plants – whether electric, thermo-hydraulic, data transmission or any other kind – are the nerves and intelligence of all buildings.

They allow us to manage and optimise our use of energy, climate, sound, alarms, communications and to synchronise any device – electric, electronic, mechanical, hydraulic – based on time of day, use conditions and user expectations.

Through its Compact Home range, ABB makes a full product range available to residential building plant designers and installers. Reliable, easy-to-use and based on advanced technology these products are the result of continuous and intense research and know how of the world-leading provider of smarter home and smarter building solutions.

Today ABB offers all the products, systems and services needed to guarantee maximum domestic comfort and protection, in any environment or context.

ABB's Compact Home range includes devices and equipment used to reliably manage utilities: these solutions enable you to optimise, integrate and make safety, protection and comfort systems inside and outside your home more efficient, from kitchen to bathroom, lounge to bedroom, garage to garden. Range integration and modularity are two of the basic concepts of ABB's Compact Home. All products are versatile and can be easily upgraded and extended with other solutions chosen from the vast ABB solution portfolio.

Devices installed in the control panel or switchboard are flanked by Compact Home range control and automation solutions based on the most modern aesthetic and design concepts, but also provided with analogical and digital functions and bus or wireless communications.

A technology that isn’t to see, but is to live

The endless personalization and integration possibilities of ABB's residential solutions allow you to tailor systems eactly to your requirements, combining protection, safety, comfort and savings.

Protection
Protecting means safeguarding users, environments and equipment against risks and damage linked to faults or inproper usage.

Surges, overloads, short circuits or earth leakage currents are dangerous situations which, with no adequate control and protective measures, can damage the plant and lead to bad accidents.

To protect installations and investments against these hazards, the Compact Home range provides miniature circuit breakers (MCBs), residual current devices (RCDs) and further protection devices. Additonally, the Compact Home range gives users peace-of-mind that their plants always satisfy parameters established by the most binding international standards.

Safety
Protecting one's personal, domestic environment against unauthorized access has always been one of our most important needs. ABB offers a number of safety solutions guaranteeing control over the surrounding environment to avoid intrusion and dangerous situations.

The Compact Home range includes integrated anti-intrusion, video control, video entry-phones and building automation systems.

Reliable, flexible and affordable, these products come in both the bus and wireless versions and allow you to control and interact with your environment, locally or from a distance, by mobile phone or through internet.

These systems are flanked by effective controls and modular alarms on DIN Rails, installable in any ABB switchboard or small control panel.

Comfort
Our home usually is the place where we expect greater comfort and well-being.

Modern technologies provide all the necessary features to make our home comfortable, smart, and efficient.

ABB’s Compact Home products make the different plant components functionally adaptable to the user’s comfort. All the functions that can be controlled such as blinds, lighting, heating, air-conditioning or door communication are designed to make life simpler and smarter.

Savings
Increasing energy costs and environmental sensitivity have stimulated users to pay greater attention to energy usage and efficiency.

Even at home, those small daily gestures – like using the cheapest tariff brackets appropriately – can have a fundamental impact on both your home budget and a more rational use of our planet’s resources.

The ABB Compact Home catalogue offers several products with innovative functions, with efficiency and energy savings as their main target.

Smart protection for lasting comfort
Applications for an apartment

1. Protection of the stove and other kitchen equipment
There are many situations in which a short-circuit can occur, e.g. bad insulation of kitchen equipment and connection to water. Without suitable cable protection, not only the connection cable of the kitchen equipment would become charred, but also the cable installed in the wall behind the socket outlet. In worst case there also is a hazard for people. ABB's MCBs protect you and your installation in the best way – easy and safe installation is possible.

2. Separate protection of media and TV circuits
In newer installations, TV and media circuits are protected separately. Due to the electronics used in this kind of loads they could inject harmonics into the system and maybe it interferes with other electrical equipment. MCBs provide the best protection in cases of overload and short-circuit. ABB's MCBs protect you and your installation in the best way – easy and safe installation is possible.

3. Main residual current protection
In order to ensure safety and continuity of service, ABB offers selective type RCCB F200 S solution to perform selectivity with the RCDs protecting terminal circuits.

4. People and circuit protection
RCBOs permit continuity of service disconnecting only the circuit having a overcurrent or earth leakage issue, keeping the rest of the house operative.

5. Surge protection
Compact and easy to install, the DIN Rail OVR Type 2 range provides high overvoltage protection to your sensible equipment and to your apartment.

6. Prevention of overloads
Load management relay LCR prevents tripping of the main circuit breaker by sequentially switching off non-prioritary loads when preset threshold is exceeded. One red LED and an integrated buzzer indicate the OFF condition. At preset time intervals, the device automatically attempts to reconnect to the previously disabled load.

7. Safety for auxiliary circuits
Door entry and bathroom safety pushbuttons should always be supplied in SELV (safety extra low voltage) for safety reasons. TS transformers supply these auxiliary circuits; in case of short circuit TS are made to disconnect automatically the secondary winding and restore their feature automatically as soon as fault is repaired.

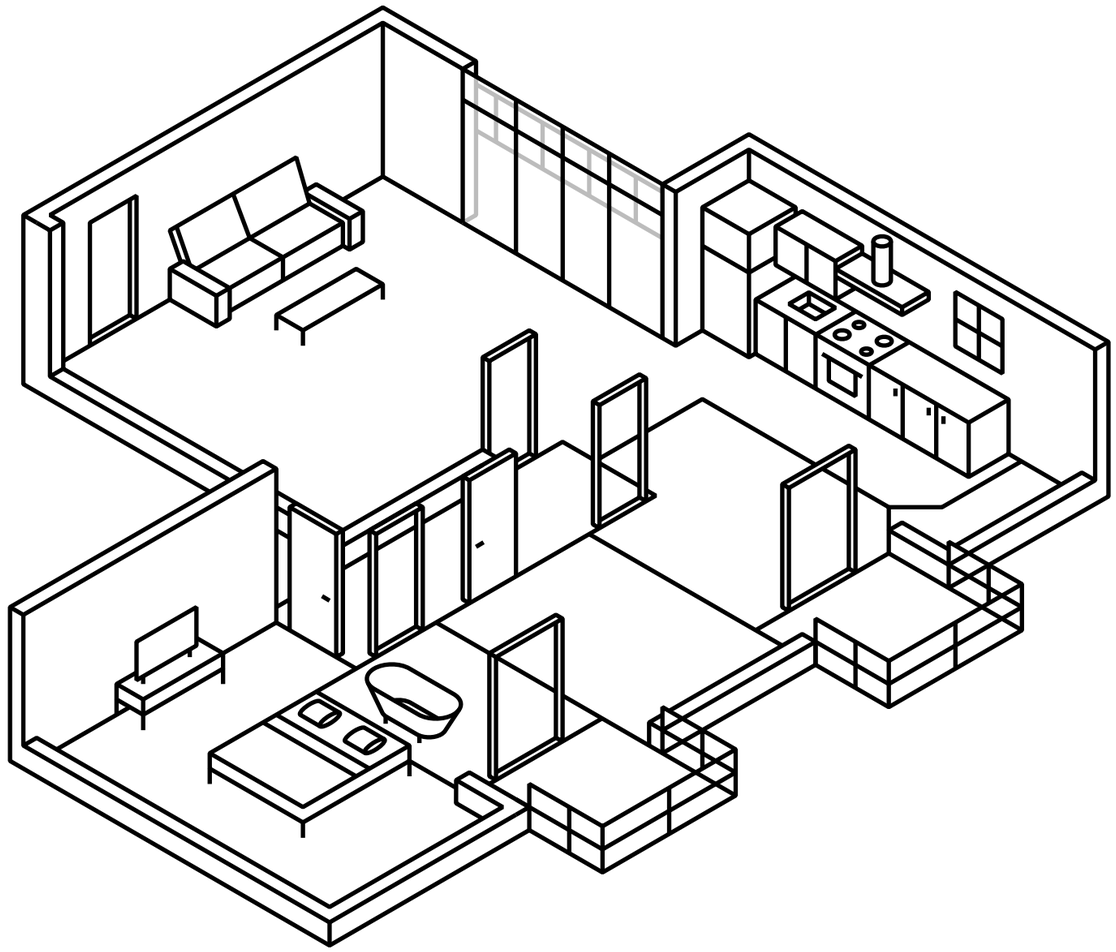

8. Bioarchitecture made real
E235 mains disconnection switch ensures no electricity in wiring accessories and electric devices on bedroom circuits when sleeping. Of course as soon as user switches on a load, electricity immediately flows again to supply it.

9. Object metering
Heating and ventilation pumps are obvious candidates for object metering in the home. Also electronic equipments such as washing machines and dishwashers are possible objects to measure.

10. UK600 – a smarter space for your installation ideas
The UK600 series offers new possibilities in terms of application areas, flexibility and design. Its product portfolio includes 3 kinds of enclosures: standard for DIN-Rail devices, Media for LAN routers etc. and the Combi enclosure, a combination of both.

Expertise that lets you think big
Residential applications

1. Common lighting circuits protection
In newer installations, lighting circuits are always protected separately from socket outlet circuits. Therefore, it is almost impossible for a danger to occur in lighting circuits in the home sector today, as the permanently connected consumers (lights and lamps) only permit their load-dependent current. However, cable protection must be provided to prevent overloading of the cable by short-circuits.

2. Common socket outlet protection
MCBs provide the best protection in cases of overload and short-circuit. For sure, you can also disconnect your circuits with MCBs if you need to make maintenance work. There is a limit to the current carrying capacity for all cables! It's not important whether the short-circuit is caused by a defect common appliance or whether a nail pounded into the wall hits the cable. In addition, similar consequences can result when too many appliances are connected to a circuit at the same time (e.g. several fan heaters) to one and the same circuit via a multiple socket-outlet (overload protection).

3. Residual current protection in the common areas
The FH200 RCCB range up to 63 A offers the solution for the protection against insulation fault of any kind of common circuits like the staircase, outside and garage lights, porter's lodge, automated gate and all the common sockets.

4. People and circuit protection
RCBOs permit continuity of service disconnecting only the circuit having a overcurrent or earth leakage issue, keeping the rest of the house operative.

5. Gate management
Thanks to ATT GSM module, all housemasters can open building gate with their mobile by just dialing a number. ATT recognises authorized users avoiding the use of hundreds of expensive and unsafe gate remote controls.

8. Surge protection
Compact and easy to install, the DIN Rail OVR Type 2 range provides high overvoltage protection to your sensible equipment and to your home.

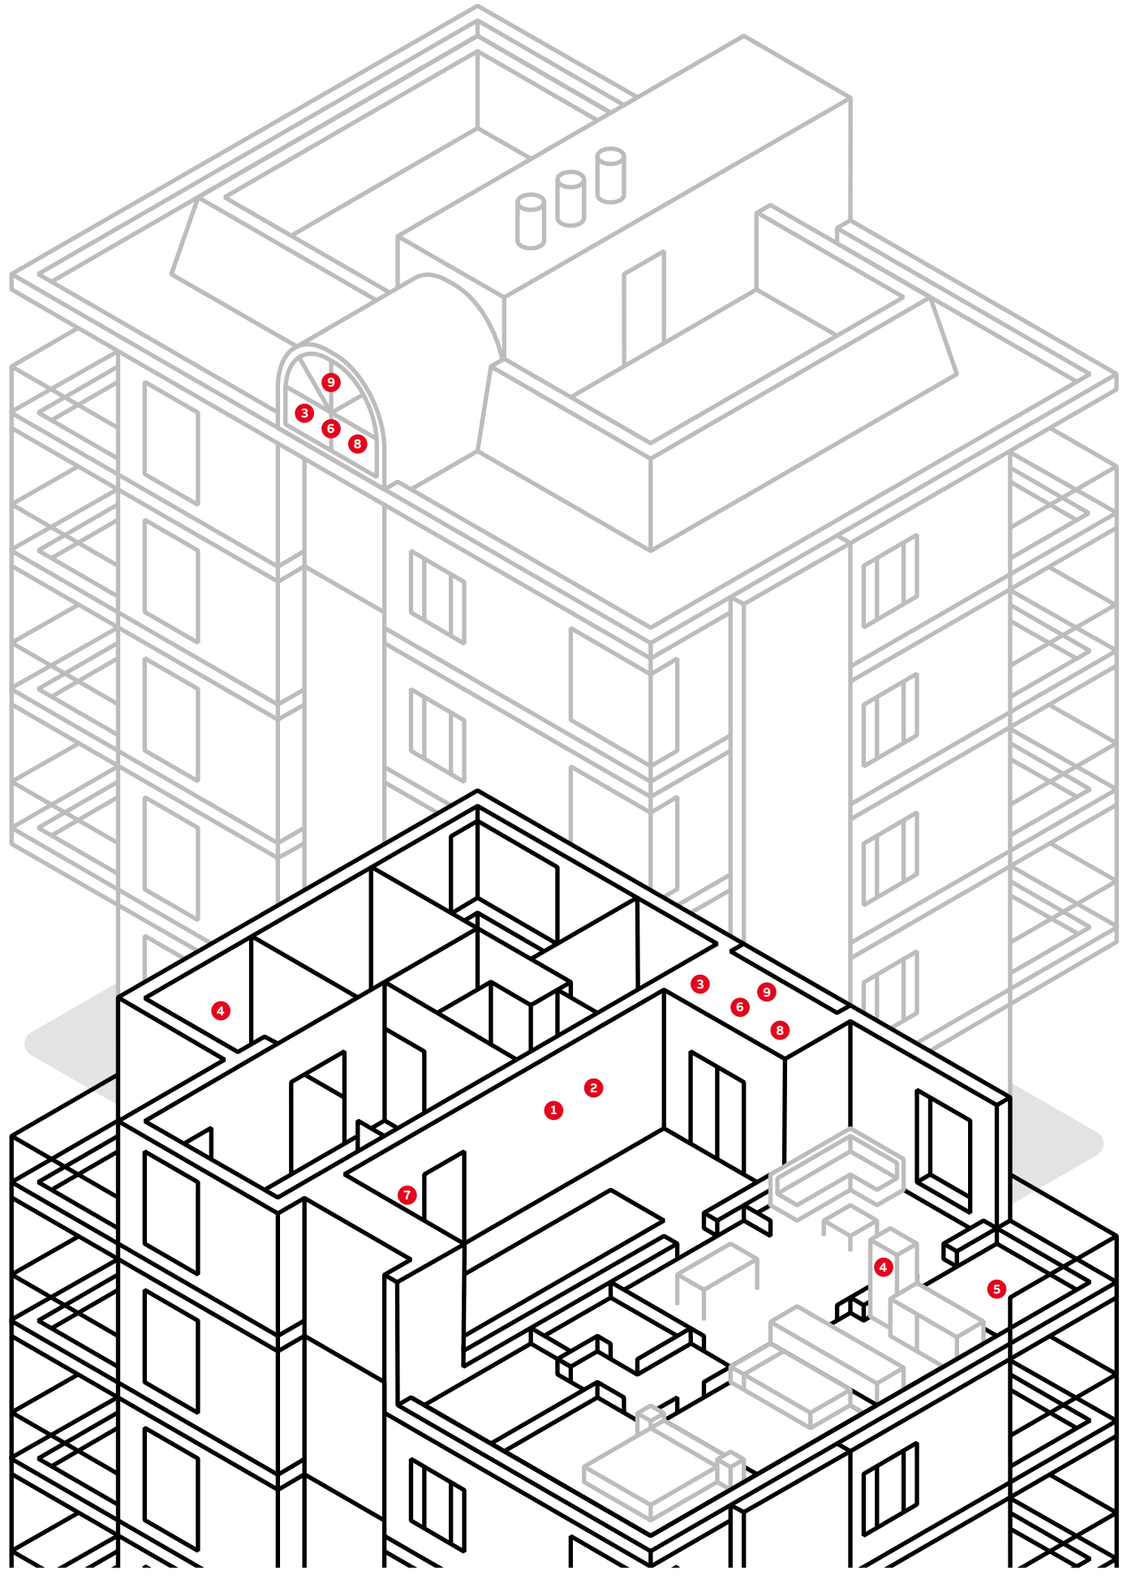

7. Staircase lighting
E232 staircase light switches allow to switch on staircase lights only when needed, as user pushes a button. This way users can avoid energy waste, while ensuring full light availability when walking on stairways. E232 can be forced permanently on for staircase cleaning and maintenance purposes.

8. Joint residential sourcing
Unlike applications where a separate billing meter is installed in every apartment or residence for individual billing, joint residential sourcing involves having one central 'billing' meter. The housing association, condominium or equivalent then acts as a single electricity subscriber and redistributes its costs amongst its members according to their actual consumption measured by a meter in each apartment.

9. An attractive enclosure that can be discreetly integrated into your interior
The Unibox consumer units are distinguished by an advanced and elegant design. They integrate themselves easily in whichever decoration solution; for the door, it is possible to choose between the transparent smoked version and the opaque white version. Functionality of the Unibox Series and its safety of installation and safety of use guarantee high quality of construction characteristics.

Greater comfort, full protection
Applications for detached houses

1. Protection of the entry phone line and other telecommunication systems
In this kind of application normally different voltage level and/or different frequencies are used. To ensure the correct working of these circuits, cable protection must be provided to prevent overloading of the cable. There is a limit to the current carrying capacity for all cables! ABB MCBs protect you and your installation in the best way – easy and safe installation is possible. Make your choice.

2. Protection of security systems, bell circuits or electrical shutters
To ensure the correct working of these auxiliary circuits with maybe different voltage-level cable protection must be provided to prevent overloading of the cable by short-circuits or even an overload e.g. due to obstruction of the shutter. Without suitable cable protection the cable installed in the wall behind the loads becomes charred and maybe needs to be replaced or even the devices get damaged.

3. Sauna and swimming pool residual current protection
To ensure continuity of service and avoid nuisance tripping due to the natural earth leakage currents that are common in a wet environment, it's a best practice to protect individually the sauna and the swimming pool circuits with a dedicated DSH201 RCBO for each line.

4. Mains disconnection
SHD200 switch disconnector is installed upstream whole electric distribution system ensuring and it is suitable for commanding loads.

5. Customize your energy consumption
Digital time switches allow operation of heating, lightening, irrigation system, etc. They enable to open and close circuits according to a daily, weekly or yearly program, controlling single load or group of loads even when they require different time controls with a common time reference.

6. External lighting only when needed
With twilight switch TL1 external lighting switches on automatically when getting dark, thanks to external light detection sensor. Threshold can be programmed on a wide lux range ensuring both optimal lighting and energy efficiency.

7. Safety of outdoor circuits
Care should always taken on outdoor lighting. Especially when close to pools or fountains, a safety extra low voltage transformer TS-C can supply continuously low voltage lighting devices preventing risks of indirect contacts.

8. Burner and venting control
ESB and EN contactors provide efficient load control, for single and three phase loads up to 63 A of rated current. Thanks to their endurance and high switching capacity ESB and EN are ideal in automation of frequently operating loads.

9. Object metering
Heating and ventilation pumps are obvious candidates for object metering in the home, and these can be joined by appliances such as electronic equipment, washing machines, dishwashers as well as sauna. And don't forget outdoors. Garden terrace heaters space and lighting plus the pond pump are all significant 'energy thieves'. The actual consumption is easy to measure with EQ meters. EQ meters A-series measures in two directions, so it is suitable for a residential PV application.

10. One complete solution for your home
Electrical enclosures for the residential applications coordinate between all technical elements that make up the interior essential in today's homes. The AT & U compact distribution boards from ABB response this trend about an ever increasing offer of products for home installations. ABB offers with AT & U cabinets one complete solution for all electrical installation requirements in your home.

An offering designed to meet present and future needs

The measure of an offering's worth is its completeness and integration. ABB offers solutions that meet and anticipate all the needs of contemporary life: from video entry phones and video surveillance to home automation and charger systems for electric vehicles.

1. Home series
The ABB residential series are the best available on the wiring accessories market. The materials, shapes and colours of plates and controls can be matched, with umpteen combinations, adding value to environments based on your taste, fantasy and needs.

Aesthetics must not sacrifice safety and comfort. The series have a complete energy and alarm functions line, from control devices to plugs, from safety and comfort devices to alarm units, from protectors to detectors, from limit switches to special systems, from domotic bus solutions to installation components.

The series are all integrated with ABB products portfolio, ensuring modular architecture that is always expandable.

2. Entry phone/ Video entry phones
ABB systems offer solutions which enable you to implement entry phone and video entry phone systems for single homes and large residential complexes really easily.

Integrating any internal or external architectural style, these products offer users the most advanced functions and are available in analogical, digital and even wireless versions.

3. Home automation and security systems
ABB home automation systems turn a house plant into an intelligent system, adaptable to the wellness, safety, protection and saving needs of whoever lives in it.

ABB domotic line modularity can be adapted to any type of building, giving us full, integrated management of safety and comfort functions.

From anti-intrusion control to managing lighting, to operating loads for greater energy efficiency, ABB domotic systems on bus are easy to install, program and use, with decided modular features guaranteeing the plant can grow based on a customer's evolving needs.

4. Comfort control, security system and radio video surveillance
Available in wired or wireless versions, both analogical and fully digital, ABB solutions allow users to create an inviolable, customised safety barrier between the house and its outside area. Signalling effective danger or discomfort situations, they guarantee users full control over the perimeter.

Reliable and technologically advanced, the ABB burglar alarm and video entry phone lines are modular and integrated with a modern, valuable design meaning they can be used in any architectural context.

5. Components for solar PV plants
ABB has developed a complete range of photovoltaic application products. They satisfy any plant need, from photovoltaic fields to micro domestic installations. Switches, isolators, dischargers, trackers but also measuring and control parts, control panels, distribution units...everything needed to integrate, monitor and protect the energy generated by house panels, in a safe, protected way.

6. Charger systems for electric vehicles
Electric vehicles are the new mobility frontier.

E-mobility challenges are not just in the ability to generate energy but also in the possibility to integrate different sources, to accumulate excess production and dislocate safe, reliable charge points accessible for everyone, even in the home environment.

For really personal, sustainable mobility ABB offers a rich catalogue of electric vehicle charging products, from turnkey solutions to single components.

7. External lightning protection with the OPR range
The ABB OPR range makes the construction of a lightning protection system very easy to install. Designed to conduct the lightning current from the external rod to the earthing system, it will keep your home safe and protected against any damage. When you have external protection, you must add a surge protection device (OVR range) to protect your electrical installation and sensitive equipment.

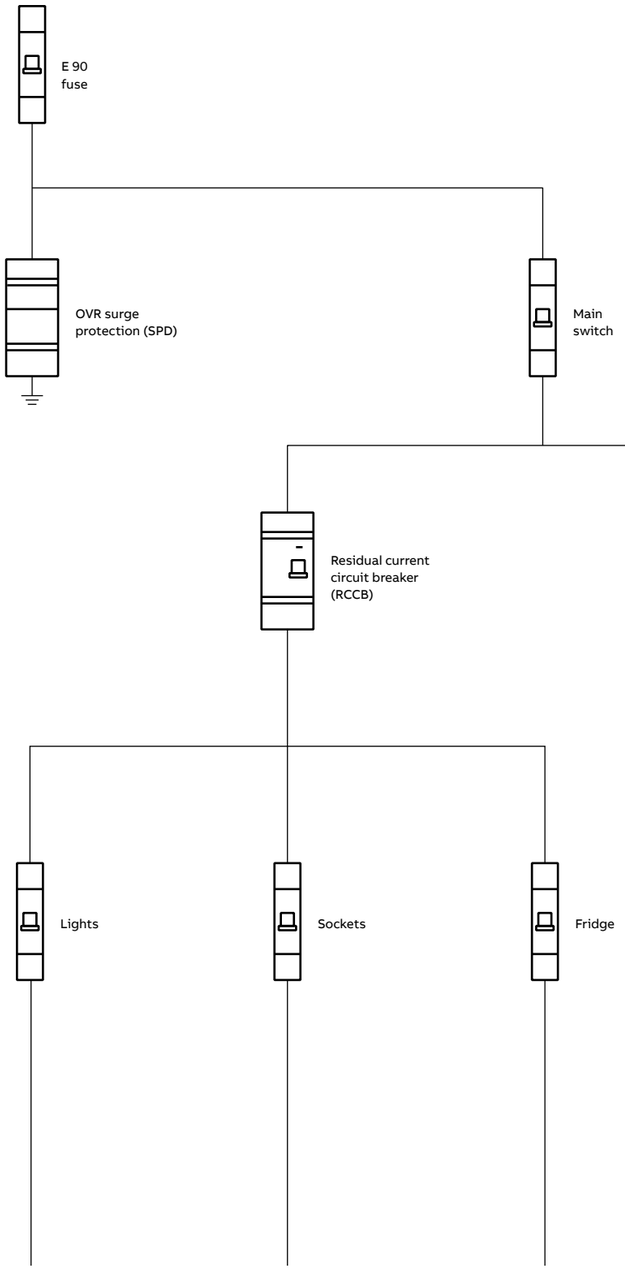

8. Switchboards protecting and isolating photovoltaic plants
ABB offers the best solutions to protect, isolate and cut off photovoltaic sources.

In particular, string combiners – consolidating DC energy produced by the different strings making them available for inverters – allow to protect against overcurrents, lightnings and surges.

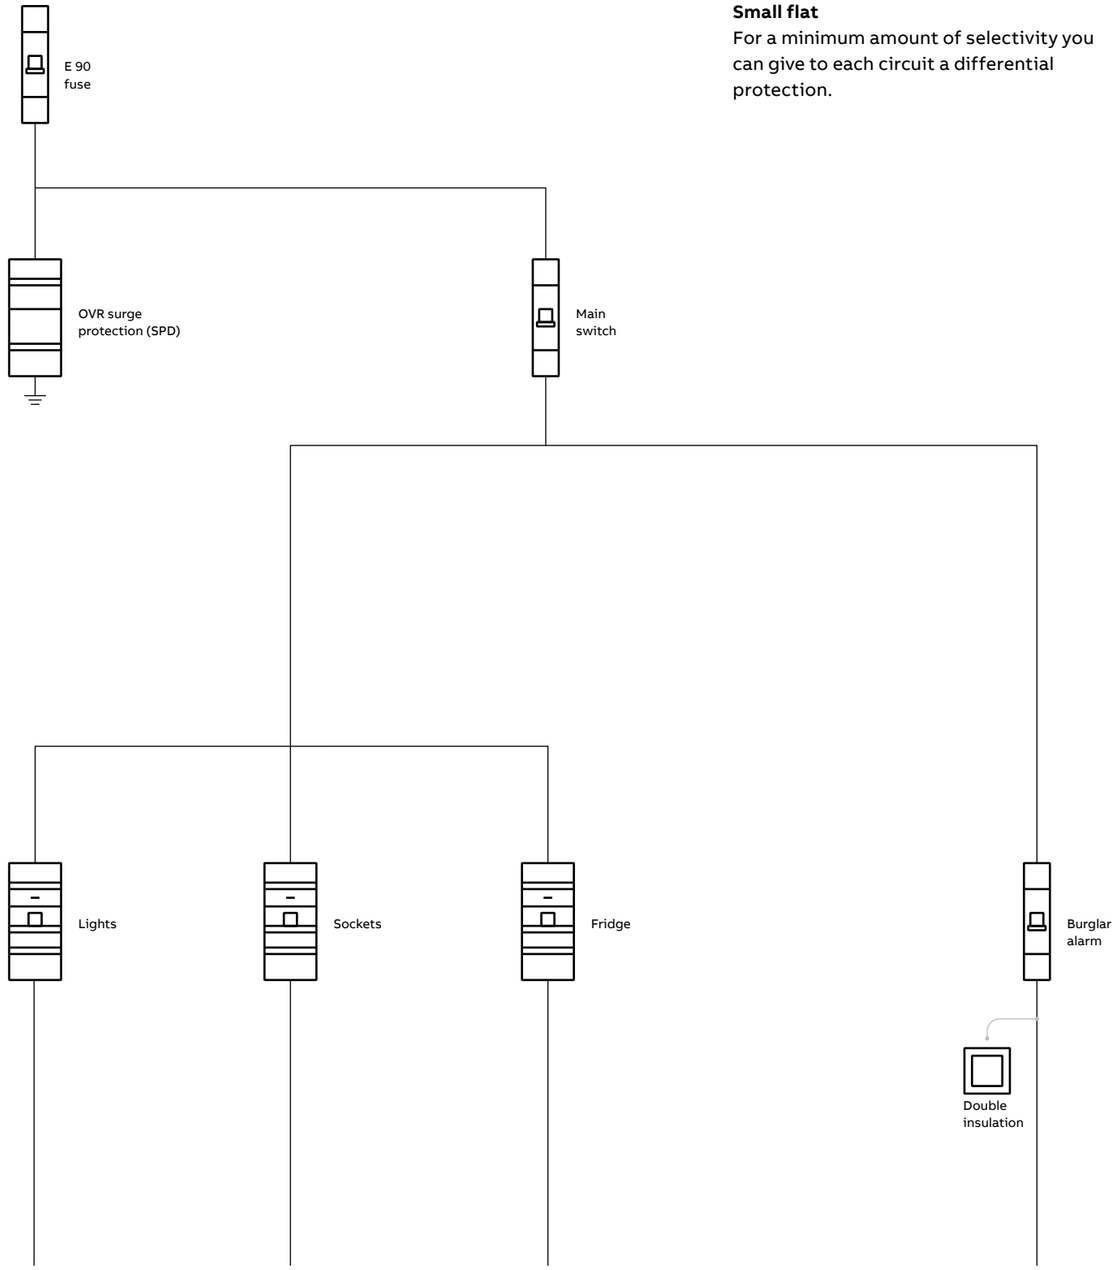

9. Selective device downstream from the meter
The S700 series products are selective main circuit breakers for DIN rail enabling you to protect electric installations from surges. They boast total selectivity towards MCBs downstream and considerable selectivity towards protection devices upstream. As they have been designed for the IV overvoltage category and integrate the isolation function they can be used in any distribution or control cabinet.

Efficiency, protection, comfort: measuring a system’s value

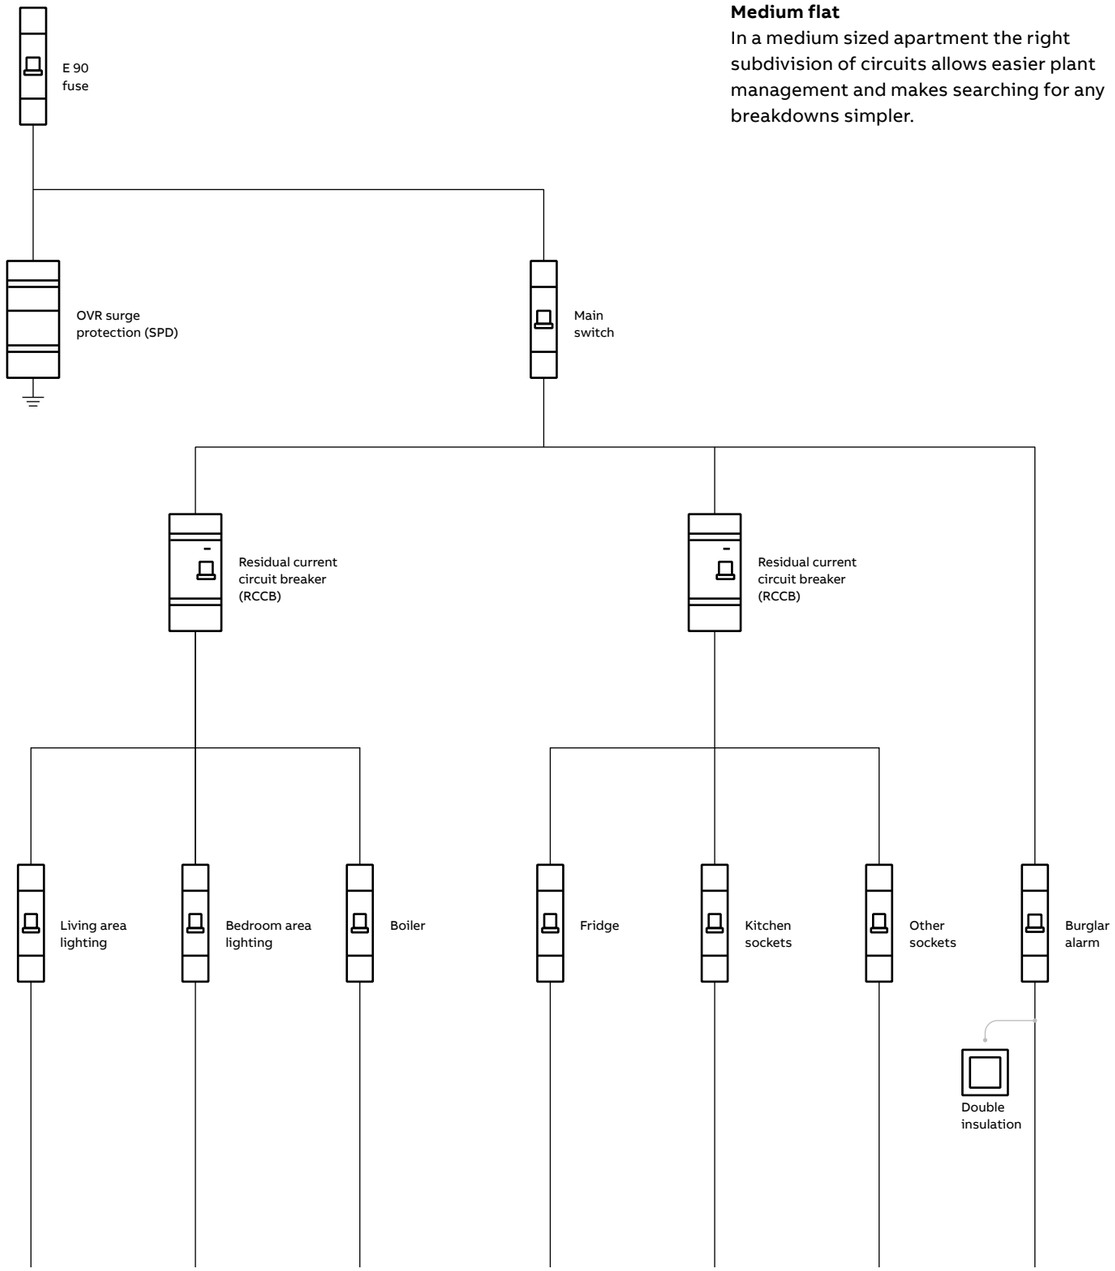

Small flat
In a small apartment plant simplicity and relative extension allows you to keep load subdivision to a minimum.

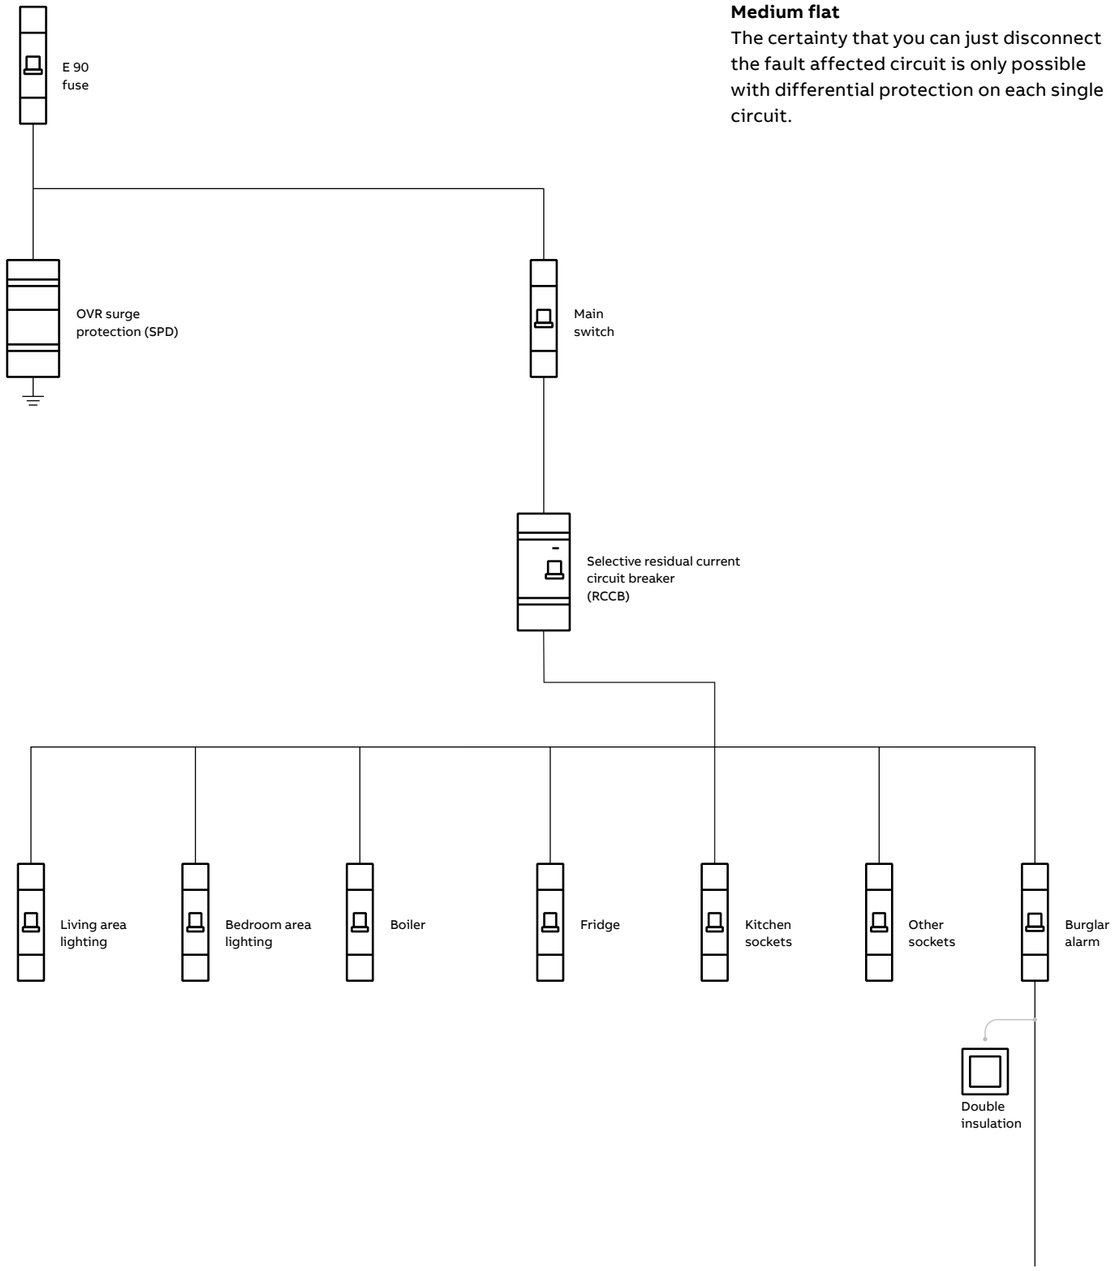

Small flat
For a minimum amount of selectivity you can give to each circuit a differential protection.

Efficiency, protection, comfort: measuring a system’s value

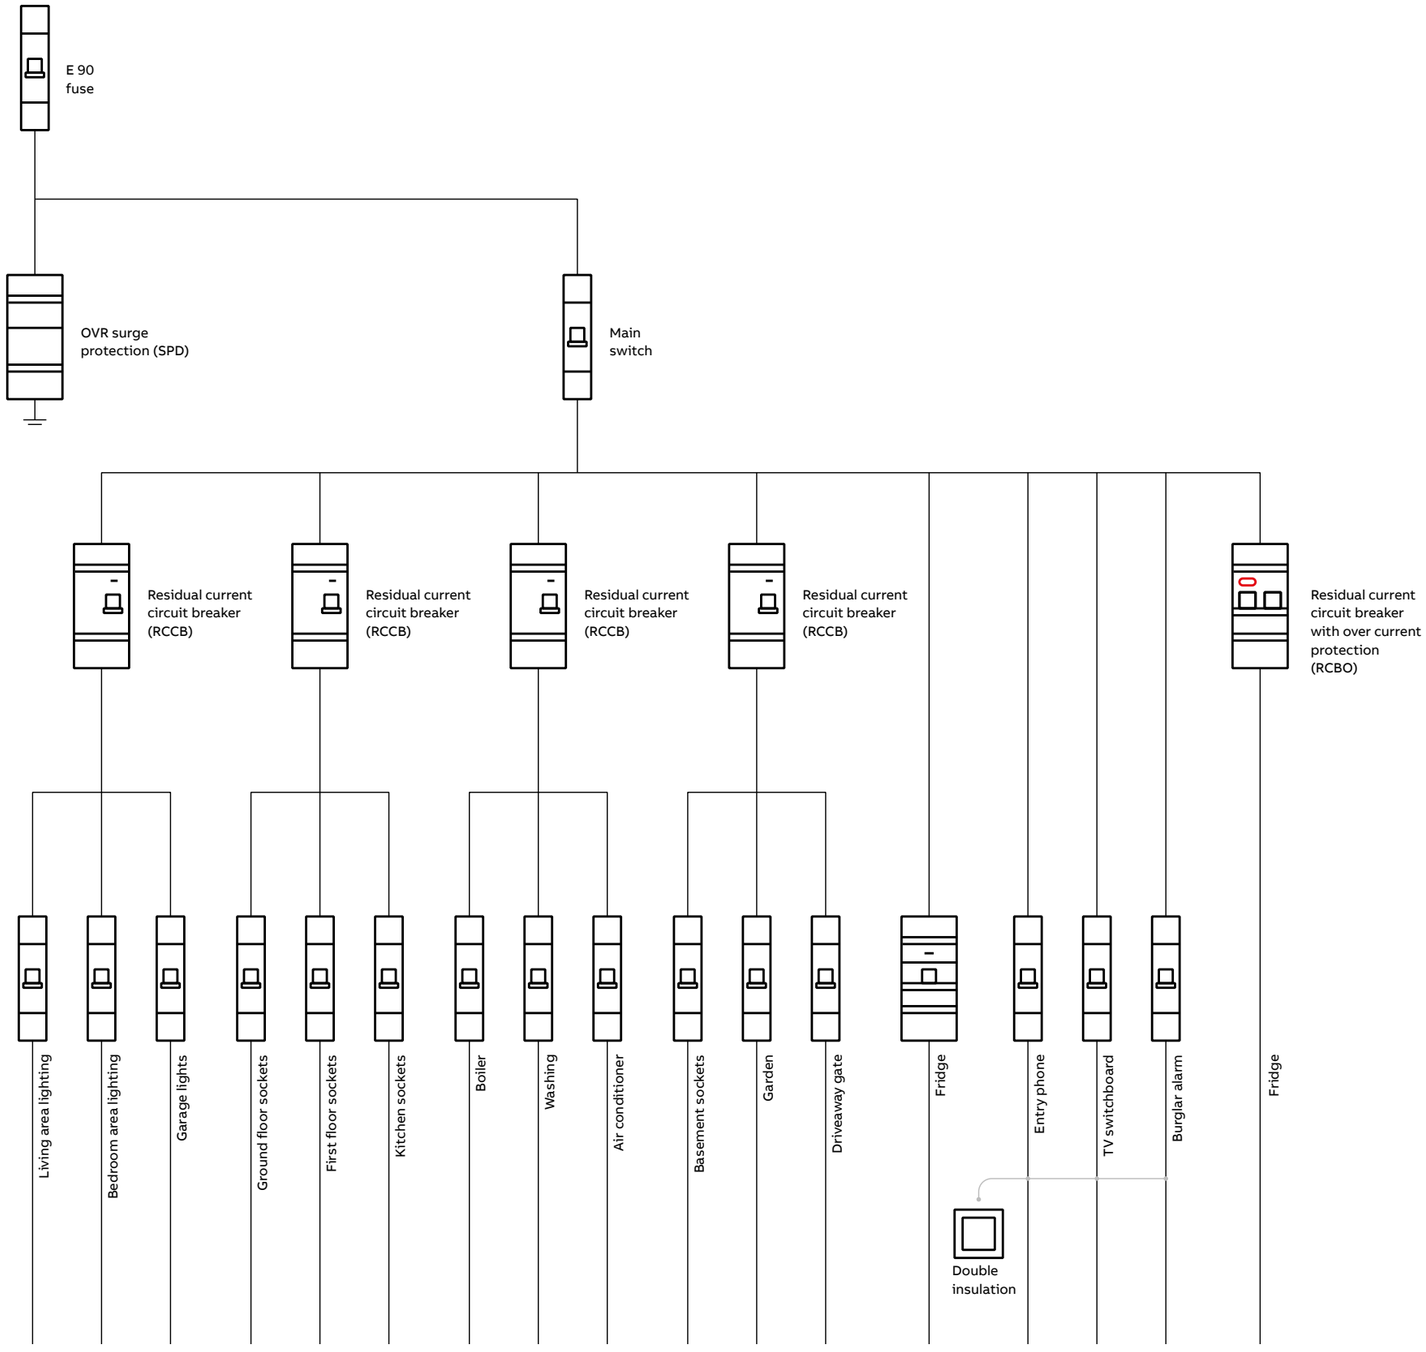

Medium flat
In a medium sized apartment the right subdivision of circuits allows easier plant management and makes searching for any breakdowns simpler.

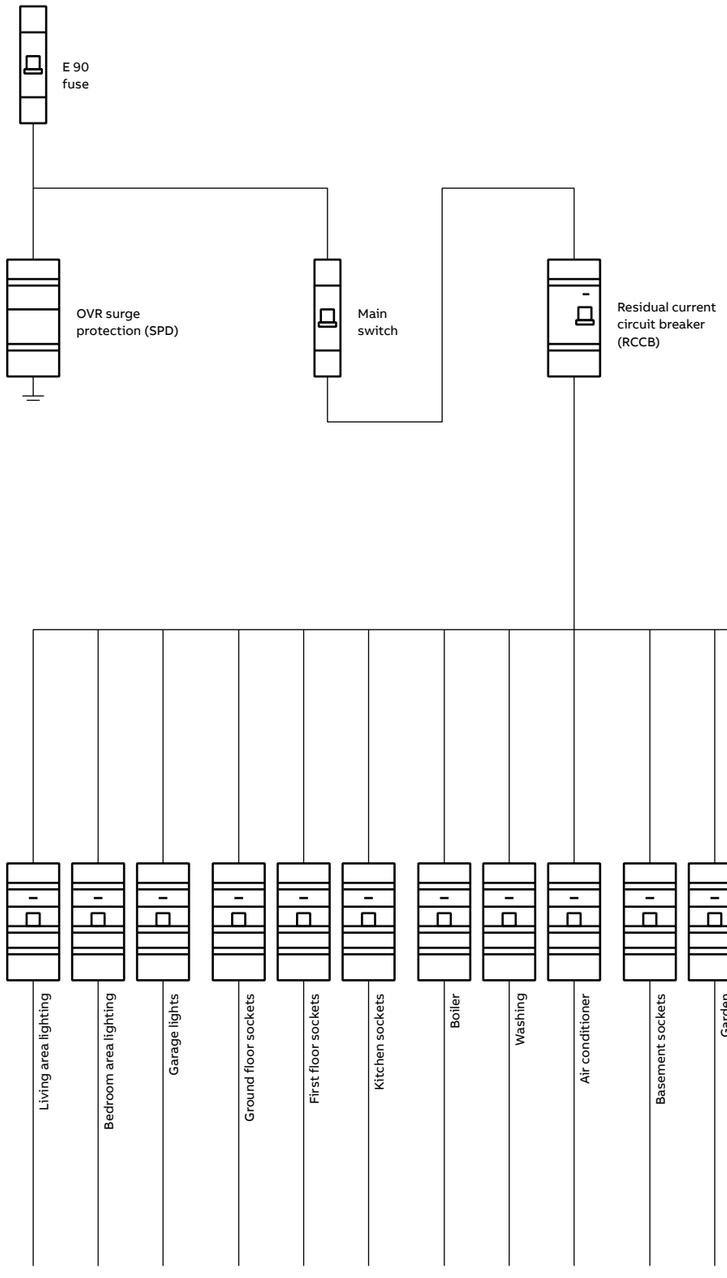

Medium flat
The certainty that you can just disconnect the fault affected circuit is only possible with differential protection on each single circuit.

Efficiency, protection, comfort: measuring a system’s value

Detached house
In a detached house the right subdivision of circuits allows easier plant management and makes searching for any breakdowns simpler.

Detached house
Full plant selectivity allows all circuits not affected by a breakdown to carry on working guaranteeing full efficiency for the rest of the plant, avoiding unpleasant disservices.

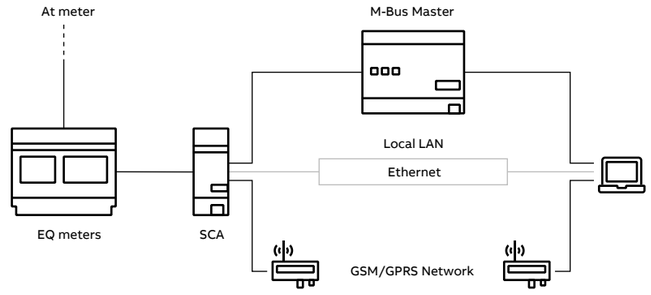

Application examples
ABB EQ meters A-series
Electronic energy meter

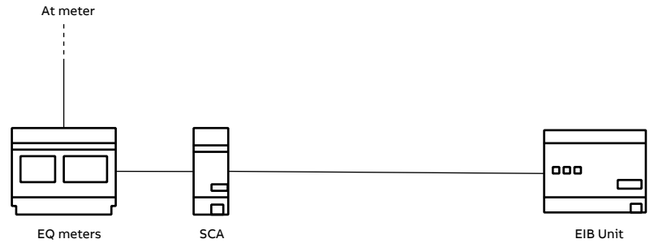

Operating principle
ABB EQ meters A-series are available for both single phase and three phase networks. They allow active energy or combined (active and reactive) energy to be measured. Energy meters A-series measures in two directions, both import and export of energy. The meters are prepared for external communication via their built-in communication interface or via a serial communication adapter (SCA).

Application environments
The EQ meters A-series meters offers an ideal solution in measuring applications for electrical energy produced in a photovoltaic installation.

Example of installation
ABB EQ meters A-series can be easily integrated into measured data collection systems via serial communication adapters. The devices are approved to the Measuring Instruments Directive (MID) European Directive 2014/32/UE.

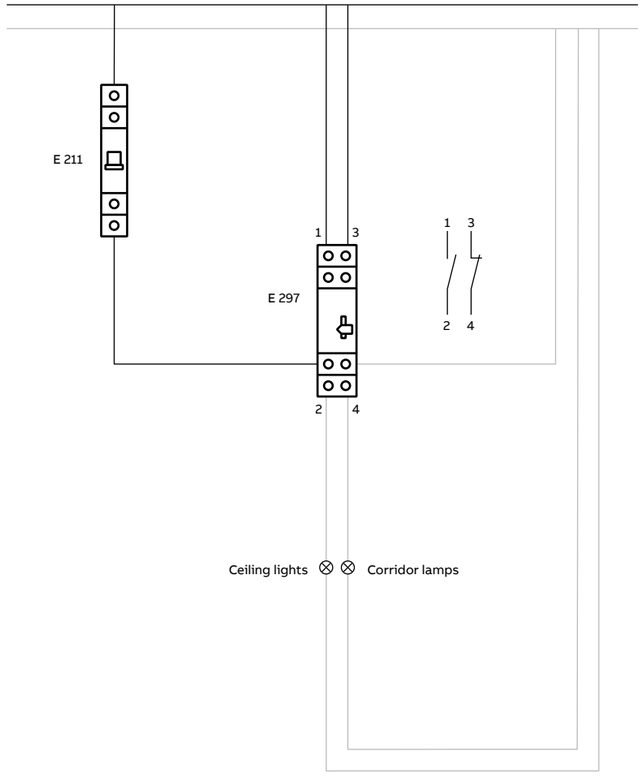

Application examples
E297 installation relays

Operating principle
The E297 installation relays are 16 A contactors specifically engineered for residential and commercial applications and are available in a wide range of contact layouts and coil voltages.

Application environments
The E297 installation relays are particularly indicated in residential and commercial buildings for lighting control.

Example of installation
The E297-16-11 installation relay can be installed with a NO and a NC contact inside the lighting system of the common areas of a building. The first control sent through a switch to the command circuit of the relay will turn off the ceiling lights and turn on the corridor lamps, while the second command returns to the previous state.

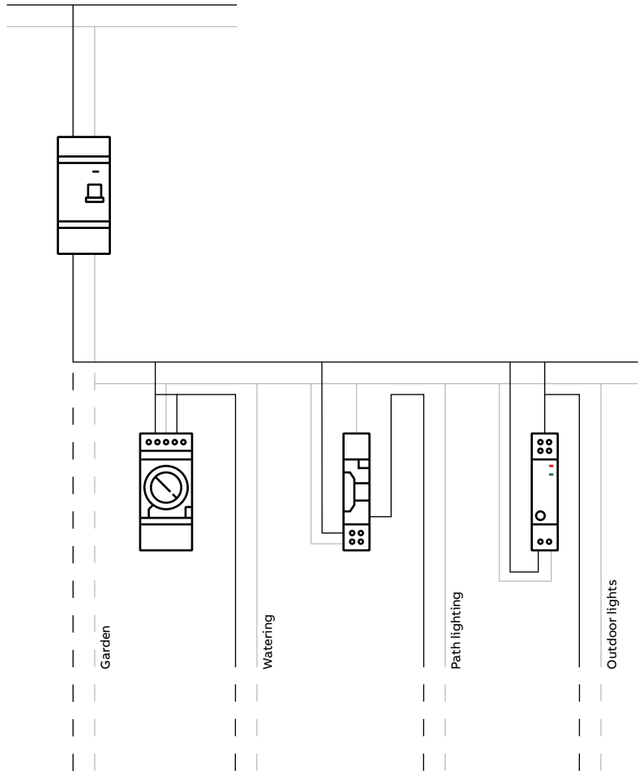

Application examples
AG analog time switches

Operating principle
The analog time switches control the circuit opening and closing according to a daily or weekly program or to manually set permanent ON/OFF operation.

Application environments
The AG time switches particularly deisigned to control lighting systems of shops or commercial buildings, heating and ventilation systems as well as control of automatic irrigation systems of private or public gardens.

Example of installation
The AD1-R-15m-72 electromechanical time switch can be assembled inside the power supply circuit of the garden. In this case the device programming enables the daily activation of the irrigation system at a preset time.

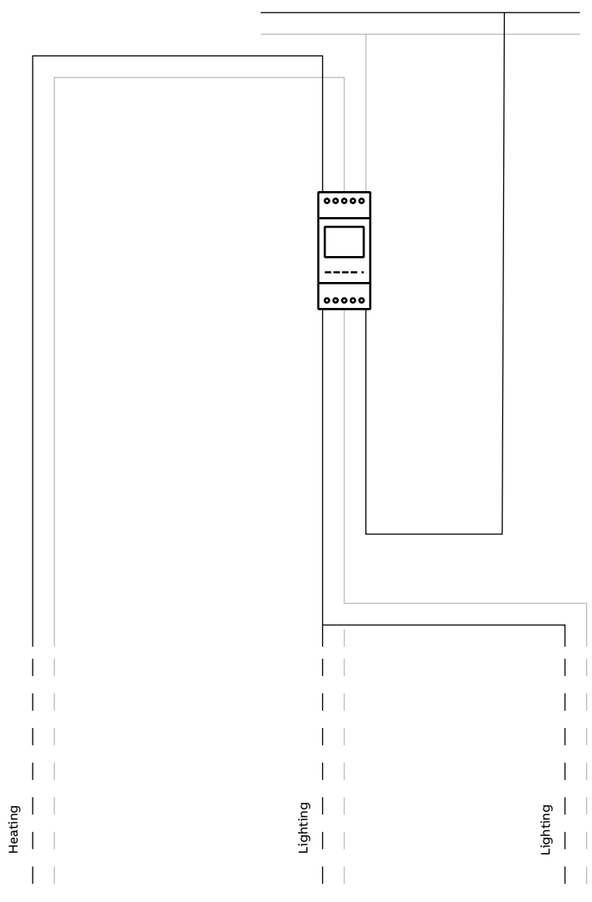

Application examples
DBT digital time switches

Operating principle
DBT digital time switches are ideal to automate installation functions such as are equipped with various functions such as impulse, cycle, random and holiday function.

Application environments
The digital time switches are particularly indicated in environments and situations requiring the management of multiple loads according to a time program flexible enough to include or exclude their application based on the day of the week (offices, schools, public areas, etc.).

Example of installation
In this example, the digital time switch allows the operation of heating as well as lighting systems of a small office; during weekend the device only controls the heating system (programmed on one of the two channels), while on the resto f the week the lighting system is also switched on (through a program on the second channel).

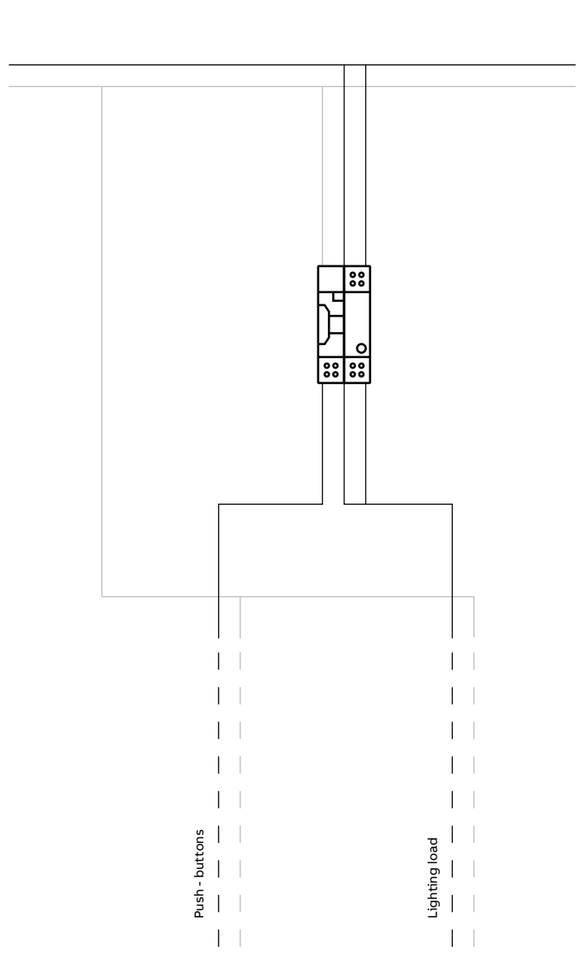

Application examples
E 232 staircase relays

Operating principle
Activated by a pulse command of a push-button, the E 232 staircase switch turns on the plant's light for a T1 time that can be protracted, with a 50% dimming of the light intensity, by means of the parallel wiring of a HLM half-light module.

Application environments
Installation of E 232 staircase switch, coupled with the HLM half-light module, can be ideal wherever timing of the lighting is requested (staircase and pathways of public places, cellars, garage, etc.).

Example of installation
One of possible applications of the E 232 staircase switch, coupled to a HLM half-light module, in the staircase lighting plant of a multistory building. Pushing the push-button, the timer of the E 232 switch turns on the lights for a settable T1 time. At the end of T1 time, the HLM half-light module dims the light by a 50% for a T2 time in the while is possible turn on again the full lighting.

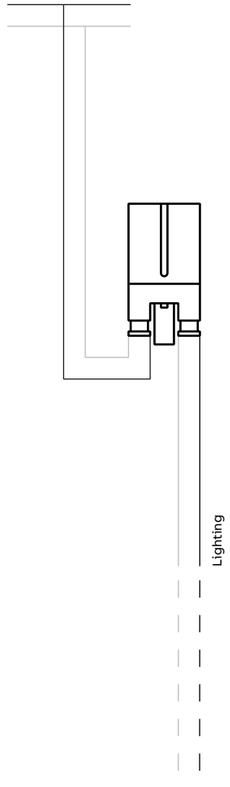

Application examples
TL Line twilight switches for pole mounting

Operating principle
The TL1 pole version is designed for installation on pole/wall and is equipped with an integrated photo-sensor preset at 10 Lux. TL1 Pole is the ideal solution to manage the external light systems such as the public ones, more precisely, in cases where there is a need of controlling the lighting of public or private roads, gardens, courtyards at the decline of solar radiation during twilight.

Application environments
TL1 pole twilight switches can be ideal to light command in private parking areas thanks to its capability of installation in pole, lamppost, etc.

Example of installation
One of the possible applications concern the installation of a pole mounting twilight switch in lighting plant. When daylight dims below a set level (e.g. during twilight) the switch turns on the lighting devices, assuring the requested lighting. At dawn, when the light raise above the set threshold, the relays of TL1 Pole returns in open position.

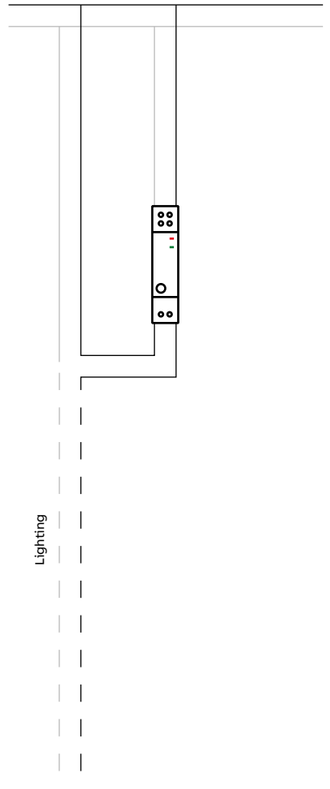

Application examples
TL Line twilight switches

Operating principle
Installation of a twilight switch in a system is particularly useful in places and situations where light sources or other environmental conditions may cause changes in the Lux level. It is used in combination with an external sensor to detect if the ambient light is higher or lower than the set level . A switching delay prevents them from operating unnecessarily when the light intensity suddenly changes (e.g. lightning, moving vehicles, etc.).

Application environments
The TWA-1 and TWA-2 twilight astronomical switches are particularly suitable for use in applications where the operation of a twilight switch with external sensor is potentially subject to alteration or damage from external agents (e.g. smog, overexposure to light, vandalism etc.).

Example of installation
One cause of reductions in the level of ambient light is atmospheric smog. Particle deposits on the external sensor of a traditional twilight switch can over time compromise its operation, preventing the activation of the lighting systems controlled. As illustrated in the diagrams, it is possible to counter this type of problem by installing a TWA twilight astronomical switch, which controls the lighting based on the ambient light level calculated from the preset longitude and latitude parameters.

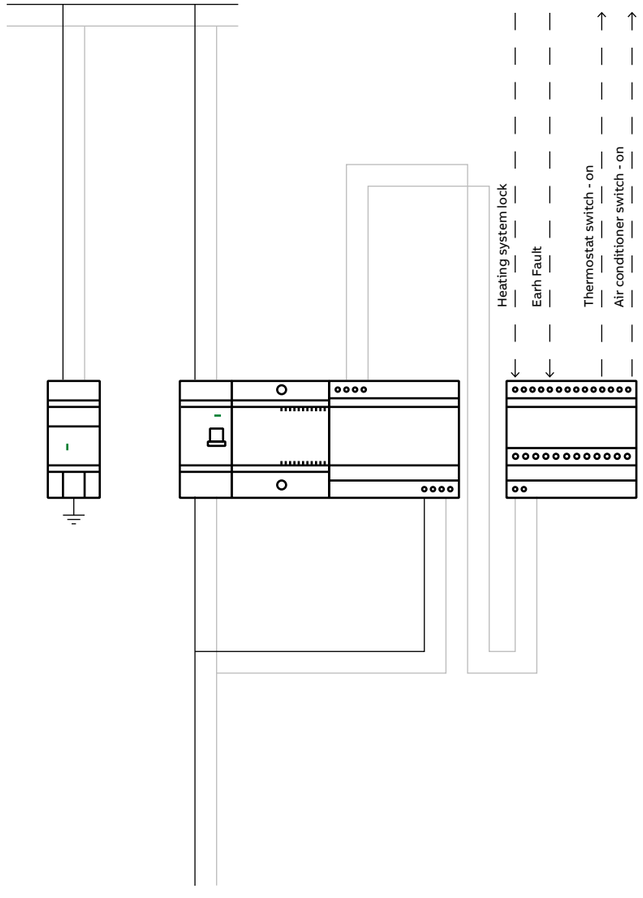

Application examples
ATT-22 GSM modules

Operating principle
ATT-22 module is a GSM terminal with 2 outputs and 2 inputs for transmitting commands and alarms via SMS message, free phone call ring, fax or e-mail. Configuration is accomplished by means of SMS messages, or using the ATT-Tool software with ATT-22 connected to a PC.

Application environments
The ATT-22 module is especially suited for residential and services-sector installations in which loads need to be remotely monitored or controlled. ATT-22E version is equipped with a pre-wired external antenna, indispensable when the module is installed in places that do not guarantee adequate GSM coverage.

Example of installation
The figures illustrate an example application in which ATT-22 module is installed in the control panel of a second home in the mountains. With a cell phone call ring to ATT-22, it is possible to switch on the boiler just before arriving at the house, or to keep it continually in operation. In the event of a problem with the boiler, ATT-22 sends a notification SMS.

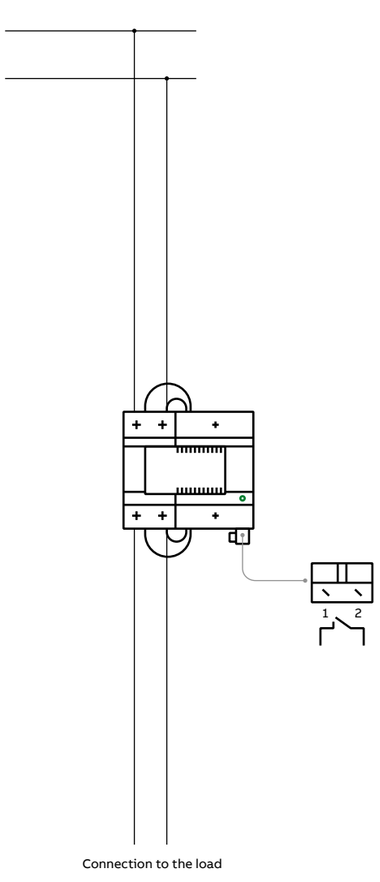

Application examples
F2C-ARH

Operating principle
The GreenLight F2C-ARH automatically recloses the associated residual current device (2 poles RCCBs up to 63 A – 30 mA or 100 mA, depending on F2C-ARH version), after first checking that there isn't an insulation fault on the circuit protected by the RCCB.

Application environments
The GreenLight F2C-ARH is suitable for installation in any TT and TN distribution system and it has been designed to always maintain continuity of service in case of nuisance trippings caused by storms or electrical disturbances, restoring current to all connected utilities after verifying the correct state of the system.

Example of installation
An ideal application of auto-reclosing device F2C-ARH is related to home distribution systems. This is particularly useful to preserve the critical loads - for example to avoid alarm system wrong intervention, irrigation stops or defrost of the freezer – during holidays or when the home is not manned, even for short periods.

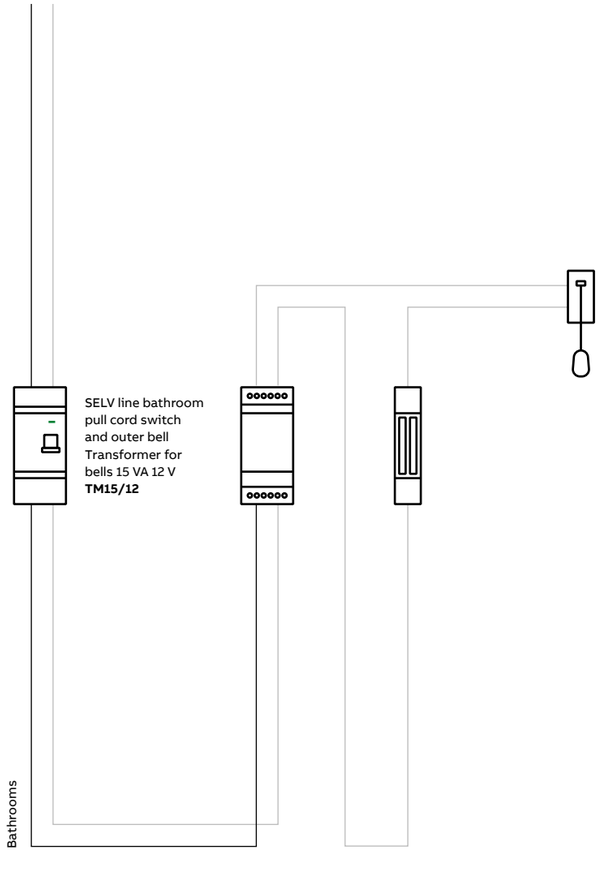

Application examples
TM, SM

Operating principle
A residual current circuit breaker with Idn equal to 10 mA installed on the bathroom circuits ensures better protection against indirect contacts. The residual current circuit breaker may be installed directly on the control board.

Application environments and example of installation
The SELV circuit guarantees safe power supply where the risk of accident is higher, such as near the bathtub.

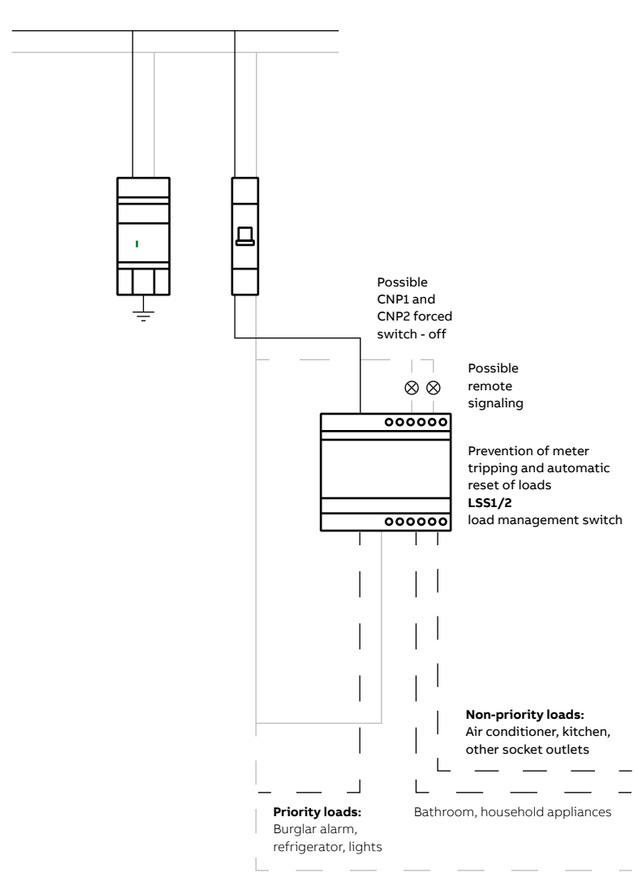

Application examples
Load management relay LCR

Operating principle
LCR load management relay prevents tripping of the main circuit-breaker by sequentially switching off one non-priori-tyload when the preset threshold is exceeded. At preset time intervals, the device automatically attempts to recon-nect the previously disabled load.

Application environments
The installation of the LCR is suitable for any environment and situation where it is necessary to control electric energy consumption within consumption limits allowed in the system.

Example of installation
As shown in the diagrams, one of the possible applications is the installation of the LCR load management relay in a printing office system, where the conditioning switch-on causes the exceeding of the energy consumption threshold defined with the supplying company by contract. The LCR preserves printing machines operation by switching off one or two primary loads automatically (i.e. night conditioning and lighting), where ON red leds indicate temporary OFF. After a preset interval, the switch checks that current consumption values fall within the limits again trying to reset the previously disconnected loads.

Protection

Continuous attention on protection, selectivity and savings ABB’s mission for your home

Protecting the electrical system is an essential step to ensure safety and comfort to its users, while providing the correct economical and functional operation of the devices it supplies.

Protection aims at minimizing risks for people and devices due to abnormal conditions or faults that impair the electrical parameters of the installation and of the loads.

In this context, an adequate coordination between the various protection devices (normally located on the sections of the system or on specific components) and an appropriate degree of selectivity help to provide total safety of the installation.

For the system to operate properly, protection has to allow quick identification and disconnection of the area affected by the problem, without hasty, inappropriate or untimely actions that may compromise the power supply to the unaffected areas.

In case a protection device trips, the maintenance personnel should have clear and essential information rapidly available in order to restore the service as quickly as possible.

A protection system must also provide adequate flexibility and reserve mechanisms, in case of malfunctioning of the main protection unit.

For a good compromise between reliability, simplicity and convenience, a protection system must be able to identify how and where the fault occurred, differentiating between abnormal but tolerable situations and actual hazards. It is imperative to act as quickly as possible to minimize risks and damage (destruction, accelerated aging, etc.), safeguarding the continuity and stability of power supply.

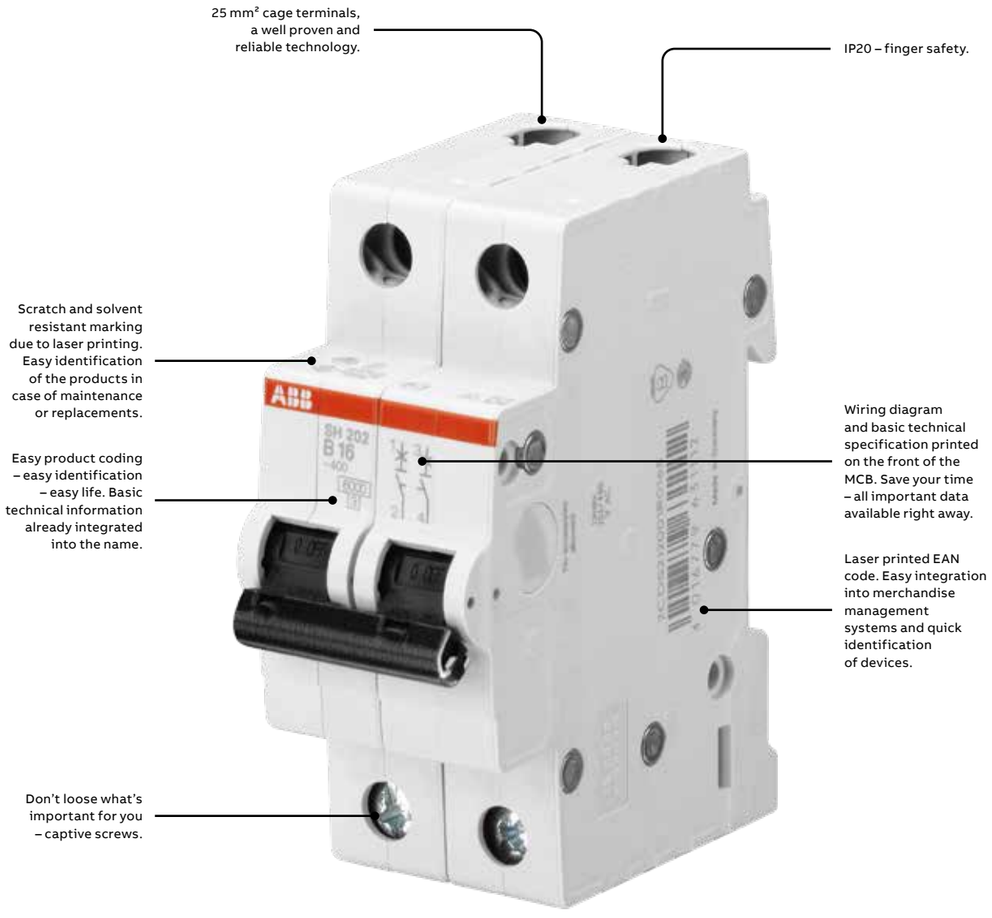

Along with the high quality and the easy installation the modular DIN rail products of the Compact Home range combine features that enable to reconcile two seemingly conflicting needs: accurate identification of the fault and effectiveness of action.

Although a marked selectivity of protective devices is rarely required by the applicable regulations and may seem unwarranted, designing a selective system means choosing a much more efficient, cost-effective solution, suited to the needs of the users and perfectly made, beyond the simple regulatory aspect.

Miniature circuitbreakers SH 200. The details make the difference

A range designed to ensure efficiency and protection

CPI
All Compact Home MCBs are equipped with a contact position indication (CPI) on the toggle. You can easily identify, if the MCB is in ON or OFF position – easy and safe maintenance work is possible.

Approvals printed on the dome
SH 200 MCBs comply with IEC/EN 60898 and carry all relevant approval marks for each market they are destined to. The certification marks are also printed printed on the dome of the MCB. Thus make it possible to see the markings also in the mounted position. For control and acceptance procedure – certification marks visible on fitted devices on the side of mounting.

Housing material
By using the state-of-the-art housing material, ABB is taking care of the environment. With the latest generation of thermoplastics it's possible to recycle the MCBs – especially the thermoplastic housing-material can be re-used. By using the latest generation of thermoplastics the material stability of all Compact Home MCBs is improved. Residential MCBs are free of halogens – no environmental pollution.

Laser printing
All printings of the Compact Home MCBs, like the approvals on the dome, the product identification, are printed by a laser. The laser printing ensures a friction, scratch and solvent resistant marking on the MCBs.

Easy identification of the products in case of maintenance or replacements due to safe laser printing.

Connection of SH and S
Compatibility with System pro M compact® is given in all kind of variations like insertion of 1 System pro M compact® MCB (e.g. K-characteristic) into an Installation with Compact Home components and Compact Home busbars. Also the combination of 1 Compact Home MCB with System pro M compact® components and System pro M compact® busbars is not a problem.

Terminals
The Compact Home MCBs are equipped with 25 mm cage terminals, a well proven and reliable technology.

The cross wiring can easily be done by inserting the Compact Home busbars and then the incoming wires into one of the MCB's terminals. The terminals accept Compact Home busbars and conductors up to 16 mm² together.

Min. operating voltage	V				12 V AC
Rated short-circuit capacity I_{cn}	kA	10 kA	6 kA	4.5 kA	3 kA
Energy limiting class (B, C up to 40 A)					3
Rated impulse withstand voltage $U_{imp.}$ (1.2/50 □s)	kV				4 kV (test voltage 6.2 kV at sea level, 5 kV at 2,000 m)
Dielectric test voltage	kV				2 kV (50 / 60 Hz, 1 min.)
Reference temperature for tripping characteristics	°C				B, C, D: 30°C
Electrical endurance	ops.				I_n < 32 A: 20,000 ops (AC), $I_n \geq$ 32 A: 10,000 ops. (AC); 1,000 ops. (DC); 1 cycle (2 s – ON, 13 s – OFF, $I_n \leq$ 32 A), 1 cycle (2 s – ON, 28 s – OFF, I_n > 32 A)
Mechanical Data					
Housing					Insulation group II, RAL 7035
Toggle					Insulation group II, black, sealable
Contact position indication					Marking on toggle (I ON / 0 OFF)
Protection degree acc. to EN 60529					IP20*, IP40 in enclosure with cover
Mechanical endurance	ops.				20,000 ops.
Shock resistance acc. to IEC/EN 60068-2-27					25 g – 3 shocks – 11 ms
Vibration resistance acc. to IEC/EN 60068-2-6					5 g – 20 cycles at 5 ... 150 ... 5 Hz with load 0.8 I_n
Environmental conditions (damp heat cyclic) acc. to IEC/EN 60068-2-30	°C/RH				28 cycles with 55°C/90-96% and 25°C/95-100%
Ambient temperature	°C				-25 ... +55°C
Storage temperature	°C				-40 ... +70°C
Installation					
Terminal					Cage Terminal
Cross-section of conductors (top / bottom)	mm²				25 mm² / 25 mm²
Torque	Nm				2.0 Nm
Screwdriver					No. 2 Pozidrive
Mounting					On DIN rail 35 mm acc. to EN 60715 by fast clip
Mounting position					any
Supply					optional
Dimensions and weight					
Mounting dimensions acc. to DIN 43880					Mounting dimension 1
Pole dimensions (H × D × W)	mm				85 × 69 × 17.5 mm
Pole weight	g				ca. 115 g
Combination with aux. elements					
Accessories mountable					No

* Also fulfilling the requirement acc. to the protection degree IPXXB

MCB SH 200 T Series – B characteristic

The SH 200 miniature circuit breaker is perfectly suitable for protecting lighting and power socket circuits that can be frequently found in residential areas. ABB used its years of experience with miniature circuit breaker to create this product by combining the optimum features for residential use alone.

The Compact Home range is versatile to provide the customer with the perfect solution for residential over current protection. It is available in tripping characteristics B and C type; with breaking capacities between 3 and 6 kA. As usual for ABB miniature circuit breaker, SH 200 is available from one to four poles and additional in one & three pole plus Neutral. The rated currents are limited to 6 A up to 40 A as it is common in residential applications.

(1) Influence of ambient temperature see below.
(2) Electromagnetic tripping valid for AC 50 ... 60 Hz.
(3) From warm operating condition (immediately after I_1>1h).

Influence of ambient temperature

The thermal releases are calibrated to a nominal reference temperature of 30°C for B and C characteristic.

In the case of ambient temperatures deviating from these values the trip values:
- are reduced in case of higher temperatures;
- are increased in case of lower temperatures.

The electromagnetic tripping is independent of the ambient temperature.

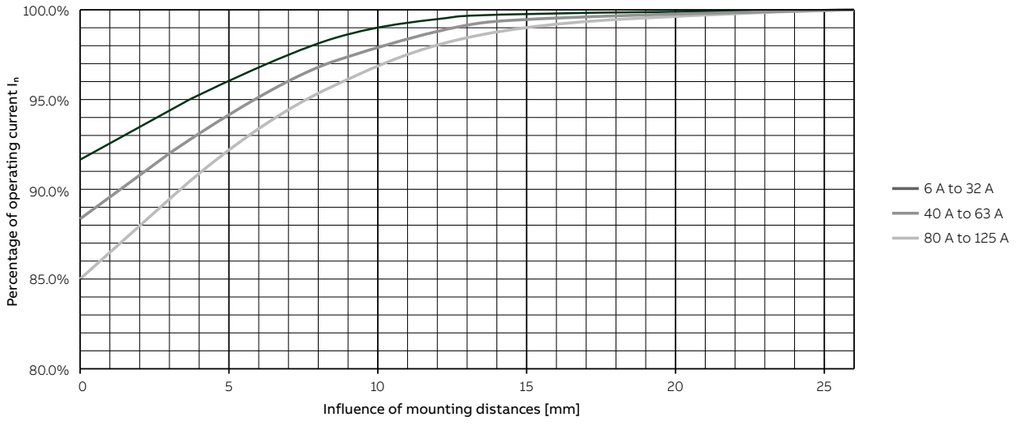

Technical details

Current-carrying capacity of the MCBs as a function of the ambient temperature

—
Max. operating current depending on the ambient temperature of a circuit-breaker in load circuit of characteristics type B and C.

Influence of mounting distances between the devices
Multiply the rated current referring to your max. occurrent temperature with the factor of “influence of mounting distances”.
Example: 2 x S802B-B125 at T = 40 °C with distance I_n = 120.4 A x 92.1 % = 110.9 A

Further influencing factors, which can lead to a reduction of the maximum operating current, are:

- Shortening the cable lenght compared to IEC 60947-1/2
- Reducing the cable cross section compared to IEC 60947-1/2
- Accumulation of cables

Characteristic	from diagram	Calculation	Example
Rated current and characteristics of MCB		I_n / B, C, D	16 A – B
Continuous load		ϑ_R	40°C
Number of MCB´s / Mounting distance		N / X	8 pieces / 0 and 8 mm
			In=16A
			incl. derating due to temp. 40°C: In=15.1A
Continuous load > 1 h		$I = I_n \cdot K_\vartheta$	16 · 0.77 = 12.23 A
Continuous load, N MCB, Distance 0	1	$I = K_\vartheta \cdot K_N$	15.1A*0.77=11.6A
Continuous load, N MCB, Distance X	2	$I = K_\vartheta \cdot K_X$	15.1A*0.98=14.8A

Max. Back-up protection

	40 ... 63	125 A	100 A

Maximum permissible earth-fault loop impedance Z_s

Impedance Z_s at U_0 = 230 V AC1 to ensure compliance with the operation conditions in accordance to IEC 60 364-4-41.

Operating time < 0.4 s; at 400 V AC < 0.2 s and at > 400 V AC < 0.1 s.

The instantaneous tripping of the MCB ensures an operating time of ≤ 0.1 s (TN system).

Determined according to DIN VDE 0100-520, supplement 2, 2002-11 (source impedance = 300 Ω, c = 0.95 and conductor temperature 70°C = factor 0.8). The internal resistance of the MCB is already included.

(1) U_0 = rated voltage against earthed conductor;
for U_0 = 240 V~ is $Z_s \cdot 1.04$; for U_0 = 127 V~ is $Z_s \cdot 0.55$

Take into account the voltage drop:
e.g. in the case of a 1.5 mm² conductor, protected by a B 16 circuit breaker, the maximum cable length is 82 m.

If the voltage is below 3%, this would result in a maximum cable length (2 wire) of 17 m.

For more details on this topic, get your own copy of the technical information leaflet “Maximum cable lengths”.

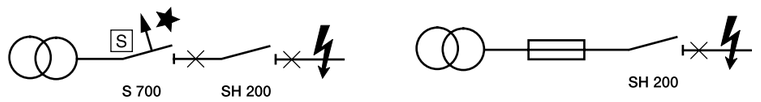

Maximum cable length in case of different voltages and cross sections on request.

Technical details

Short circuit selectivity

—
In the case of a short circuit, selectivity exists up to the values indicated.

Overall dimensions

SH200M, SH 200, SH 200 L, SH 200 T

RCCB FH200
The details make the difference
A range designed to ensure efficiency and protection

Two terminals are available, the front one for cables up to 25 mm², the back one for cables up to 10 mm² or for busbars.

FH200: a wide range of RCCBs with 2P and 4P configuration, rated currents from 25 to 63 A, available in AC and A type with rated sensitivity from 30 mA up to 300 mA.

Two terminal offer different connection solutions thanks to the possibility to connect two indipendent cables in the same device: the second terminal can be used for an auxiliary circuit or for the supply of devices with small section cables without connecting them together with the main circuit.

Safety ensured by the international marks: approvals' marking in a visible area, even if RCDs is installed and panel-door is closed.

High performances:
- rated breaking capacity and rated residual breaking capacity laser printed on the device: Im = I□m = 1000 A
- coordination with a 63 A rated current SCPD (short-circuit protective device) = 6000 A.

The FH202 can be coupled with the autoreclosing unit F2C-ARH in order to ensure continuity of service for the whole installation of your home avoiding lack of supply.

Ordering data
FH200 – AC type

Function: protection against the effects of sinusoidal alternating earth fault currents; protection against indirect contacts and additional protection against direct (with $I_{\Delta n}$=30 mA) contacts.

Standard: IEC/ EN 61008
Marking: according to EN 61008

RCBO DSH201

Compact solutions for a complete protection in residential applications

Easy to install
Supply possible either from top or bottom side with 25 mm² cage terminals with fail safe feature to avoid improper installation

Test pushbutton
Test pushbutton to verify the correct functioning of the device

Laser printed information
Information on the device are laser printed to ensure readability over time

Earth fault indicator
Blue flag on the toggle to identify earth fault trips.
I ON – 0 OFF indication molded on the toggle.

Anti counterfeiting
DSH201 is equipped with a tag RFid in order to authenticate the product

Dedicated space for label
Dedicated space to insert labels in order to clearly identify the protected lines

RCBOs DSH201

Better Look & Feel with ABB's Compact Home range

25 mm² cage terminals with fail safe feature to avoid improper installation. Supply possible either from top or bottom side, with cables and busbars (from PSH series).
Stable fixing on DIN rail, easy and fast mounting and dismounting operations thanks to the standard mounting clip.

Main technical information and product code are laser printed on the front side, visible also when the device is installed.
Range of temperatures from -25 °C (as indicated by the snowflake) up to +55 °C.

Product Made in Italy, with the indication molded on the side.
RFid tag on the product side containing a unique serial number assigned to ABB according to the standard ISO/IEC FCD 15693-3 in order to authenticate the product. Tightening torque and stripping length of the cable molded directly on the product side.

Additional information are laser printed on the lateral side of the device, including also the wiring diagram and the EAN code.

Any earth fault can be immediately identified through the blue indicator, that signals the differential tripping and which cannot be activated in case of manual operation on the toggle. Easy troubleshooting and reduced downtime for maintenance operations.

Main connection

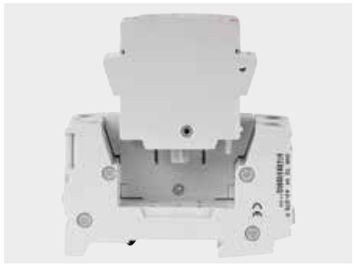

OVR Plus and T2 range.
The details make the difference
A complete range for your surge protection

The bidirectional cylindrical terminal block of the OVR T2 range allows a complete coordination with the ABB range with considerable time savings in wiring operations. All the devices allow connection through busbars, both from above and from below.

The pluggable feature of ABB surge arresters facilitates maintenance. Should one or more worn cartridges need to be replaced, the electrical circuit does not have to be isolated nor do the wires have to be removed.

The end-of-service-life indicator of the surge protective device signals the status of the device. A mechanical indicator turns from green to red when the SPD reaches the end of its service life.

The toggle of the miniature circuit breaker indicates the status of the OVR Plus range. If the toggle is on, the surge protection is active. If the toggle is off and can be switched on again, the device has protected your equipment. If the toggle is off and cannot be swicthed on. The device must be changed.

The configuration allows to use the OVR Plus range on TT and TNS network in Phase + Neutral and 3 Phases + Neutral with a high surge capacity up to 40kA Imax.

E 90 fuseholders for 10.3x38 mm fuses

E 90 and E 90h fuseholders are suitable for protection against overloads and short circuits. Available in a single module (1P or 1P + N) version and in a three-module (3P + N) version, they are designed for use with gG and aM cylindrical fuse links. The body is made from self-extinguishing material resistant to high temperatures, while the contact clips are in silver-plated copper.

E 90h fuseholders can be sealed or padlocked to assure operator safety during maintenance. Versions with blown fuse indicator allow to check whether the fuse is still working correctly or not.

TM fail safe bell transformers

These transformers, with safety extremely-low voltage secondary (SELV), are suitable for loads that require a discontinuous supply, in particular doorbells and chimes. Fail safe operation and excellent safety are assured thanks to the perfect isolation and separation between the primary and secondary circuits. In addition, the energy-saving TM-ES version allows reducing power losses by 50%.

TS non-inherently short-circuit proof bell transformers

These transformers, with safety extremely-low voltage secondary (SELV), are suitable for driving loads that call for a discontinuous supply, and in particular doorbells and chimes.
In addition to perfect isolation and separation between the primary and secondary circuits, the TS transformers have a thermal protection device integrated into the secondary circuit that makes them resistant to short circuit currents (non-inherently short-circuit proof).
The TS range is extended with the energy-saving TS-ES series, which allows reducing power losses by 50%, and the TS8/SW series, that is equipped with a switch for controlling loads connected to the secondary circuit.

TS-C safety isolating transformers for general use

These transformers are non-inherently short-circuit proof. In fact, they are equipped with a thermal protective device which automatically restores the power when the transformer is sufficiently cooled down. So even during an overload or a short-circuit they maintain their temperature below the specified limits and continue functioning after the fault's removal.

They are ideal for supplying permanent power to meters, auxiliary electronic devices (e.g. measurement, video-entry phone systems, BUS communication) and circuits with safety extremely-low voltage (SELV) for bathrooms and showers, lighting, fountains, electro-medical devices and such alike.
These devices take up very little space, from 2-module size for the 10 VA version up to 6-module size for the 100 VA version.

Bells and buzzers

Bell transformers (TM and TS) are suitable for loads that require discontinuous supply at extremely safety low voltage and are therefore mainly used in residential application in combination with bells and buzzers for public and tertiary acoustic signaling. The ABB range of bells and buzzers includes modular versions for discontinuous use (RI, BR) and modular transformers that combine in a unique solution both the signaling and transformer functionalities (TSM, TSR). Bell transformers guarantee a high level of safety thanks to perfect isolation and separation between primary and secondary circuits. In addition, the TS transformers adopt a thermal protection device integrated into the secondary that makes them resistant to short circuit currents (non-inherently short-circuit proof).

Simplicity of control makes life easier
Command and signaling devices

Using modular DIN-rail mounted devices such as on-off switches, pushbuttons, indicator lights, disconnectors, relays, contactors, bells and buzzers makes it possible to switch and control electric loads from a central location. Thanks to signalling, operating states can be recognized easily and user always has the complete control of the situation.
The range is completed by a complete range of accessories and auxiliary elements such as auxiliary contact blocks, sealing cover and distance pieces.

to be updated

ABB offers a complete range of modular DIN-rail mounted devices that makes it possible to switch and control electric loads from a central location. Thanks to the new narrow width of only 9 mm (0.5 modular width) place is saved in the distribution board. Integration of modular installation devices in the distribution boards affords the additional advantage of intelligible signalling of electric loads operating states. Easy operation or interpretation of devices is ensured by the clearly recognizable switching position (toggle lever) and/or a status display by means of an LED light. Depending on the system requirements, further signalling or control functionality for reliable operation can be used in the subdistribution board in the form of pushbuttons or indicator lights. Switch are available for different functions: on-off, change over, group control.

Commands can be coupled with electro-magnetic and electronic latching relays which allow contact switching for each impulse sent using single or parallel pushbutton. Ideal for load controlling from different positions, they are available in various versions according to pick-up voltage, contact position, installation options. They also allow manual operation on the product and contact position indicator (visual on the product).

Also important in command portfolio of product is the range of bells and buzzers, which includes modular versions for discontinuous use RI and BR, suitable for acoustic signalling in residential and commercial sectors.

Finally ESB and EN series of contactors, suitable for loads to be automatically controller through high number of operations. Contactors are used mainly in buildings for switching and controlling lighting, heating, ventilation and pumps. The ESB 24, 40, 63 contactors are used for the control of loads up to 24, 40, 63 A. Due to their DC solenoid actuator, the ESB 24 can be connected to AC or DC voltages.The EN contactors have a built-in toggle switch to select between three function modes: Off position, automatic run (normal contactor function), manual override with a return to Auto the next time the coil is energized.

Ordering data
E 210 switches

These devices are specifically made for commanding loads and signalling electrical conditions in any low-voltage switchboard.

They are available in half module or 1 module, depending on the contact-layout. The devices with indicator lights are equipped with a LED, which grants an optimal illumination with very low consumption.

The functions of these devices are particularly switching, pushing and signalling electrical conditions in any installations (low-voltage area).

General new features:
- Space-saving through 9 mm modules
- All terminals equipped with Pozidrive 1 screws
- Safe connection due to cage-clamp
- LED with bright colours and available in three different voltage ranges
- Different lens and button colours
- Compliance to international standards

E 210 pushbuttons with and without LEDs

The new products are available in 9 mm widths (= 0.5 modules).

The devices can be used in distribution boards and are all distinguished by their simple handling, ease of mounting and optimal functionality. The pushbuttons are used for remote control in all kinds of electrical installation (e.g. public, industrial). The range offers three different voltages.

(Ranges: 12-48 V AC/DC; 115-250 V AC and 110-220 V DC).

E 290 latching relays

This 18 mm wide DIN rail mounted device is designed for direct installation in main distribution or sub-distribution systems (mounted on 35 mm DIN mounting rails). The devices are activated by means of control pulses and guarantee energy-optimized lighting control. As a rule, installations with latching relays are used where the lighting control system can be operated from at least three points in different locations. Those latching relays are designed for a rated current of 16 A or 32 A.

Standard number of contacts:

1 NO contact, 2 NO contacts or 1 NO contact + 1 NC contact. The number of switching contacts can be increased by a maximum of two main contacts using a snap-on main module (E292-..-..). As a result, up to four lighting sets can be switched by a single device.

A signaling and/or indicating facility can be created using the additional snap-on auxiliary contact module (E299-11).

The various standard AC/DC coil voltages complete the comprehensive and interesting product range. The additional devices can be snapped onto the latching relay on the left or right side.

E 260 electronic latching relays

The electronic version of latching relays guarantees maximum reliability, life, and noiseless operation. The E 260 C version also allows centralized reset function (ON/OFF).

E 297 installation relays

E 259 Installation relays are 16 A contactors specifically engineered for residential and commercial applications. Their high performance in the control of lamps makes them ideal for lighting circuit applications.

The front control lever indicates the position of the contacts and allows the relay to be commanded, for example for local testing of the circuit.

In installations that require several E 259 relays side by side, it is advisable to use E 259 DIS half-module width spacer elements every second relay for heat dissipation.

ESB installation contactors

Application: the ESB contactors are used mainly in buildings for switching and controlling lighting, heating, ventilation and pumps. They are part of the complete range of Din rail products and can be integrated easily in dedicated panels.

ESB20 are AC coil operated. The ESB 24, 40, 63 contactors are used for the control of loads up to 24, 40, 63 A.

Due to their DC solenoid actuator, the ESB 24 can be connected to AC or DC voltages. This provides the following benefits: Hum-free operating system, no vibration, silent in operation, low power consumption, integrated high overvoltage protection 5 kV. You can choose between a various N.O. and N.C. contacts combination. Main accessories for ESB 24, 40, 63: auxiliary contact blocks EH04.

EN series contactors

Application: the EN contactors are used mainly in buildings for switching and controlling lighting, heating, ventilation and pumps. They are part of the complete range of Din rail products and can be integrated easily in dedicated panels.

Description: EN contactors have a built-in toggle switch to select between three function modes: Off position, automatic run (normal contactor function), manual override with a return to Auto the next time the coil is energized.

This offers many advantages as: You can make functionnal test before installation start-up. It can be used for maintenance operation, to change lamps and test it. It provides higher safety and drop out as you can switch the application manually.

The toggle switch is also used for household application like water heating where double tariff of kWh is used.

Comfortable living, easy to manage
ABB solutions for home comfort

The basic idea behind a modern electrical installation is to adapt the system to the users' needs and not vice versa, providing simple operation, safety and energy efficiency. ABB's products have all the necessary features to control homes through a flexible networking of solutions that make life easy.

Electronic components have always been used to improve performance, increase comfort and save energy.

Even in domestic installations, loads must be protected and monitored to guarantee their correct behaviour in critical conditions. This is a fundamental aspect for the comfort of users. ABB's portfolio provides efficient products to improve comfort at home.

The F2C-ARH-T autoreclosing unit for domestic and similar application periodically performs the auto test and reclosure of the associated residual current device (2-pole RCCBs up to 63 A – 30 mA / 100 mA), only after having checked that there are no effective faults in the system protected by the RCCB.

Modular devices in the load management devices category react automatically to variations of parameters and other events in the system to allow optimization. The priority switch is used in wiring systems where existing lead cross sections or the size of the power supply service box.

The E 450 priority switches in particular disconnects the long-term load as long as the short-term consumer is switched on.

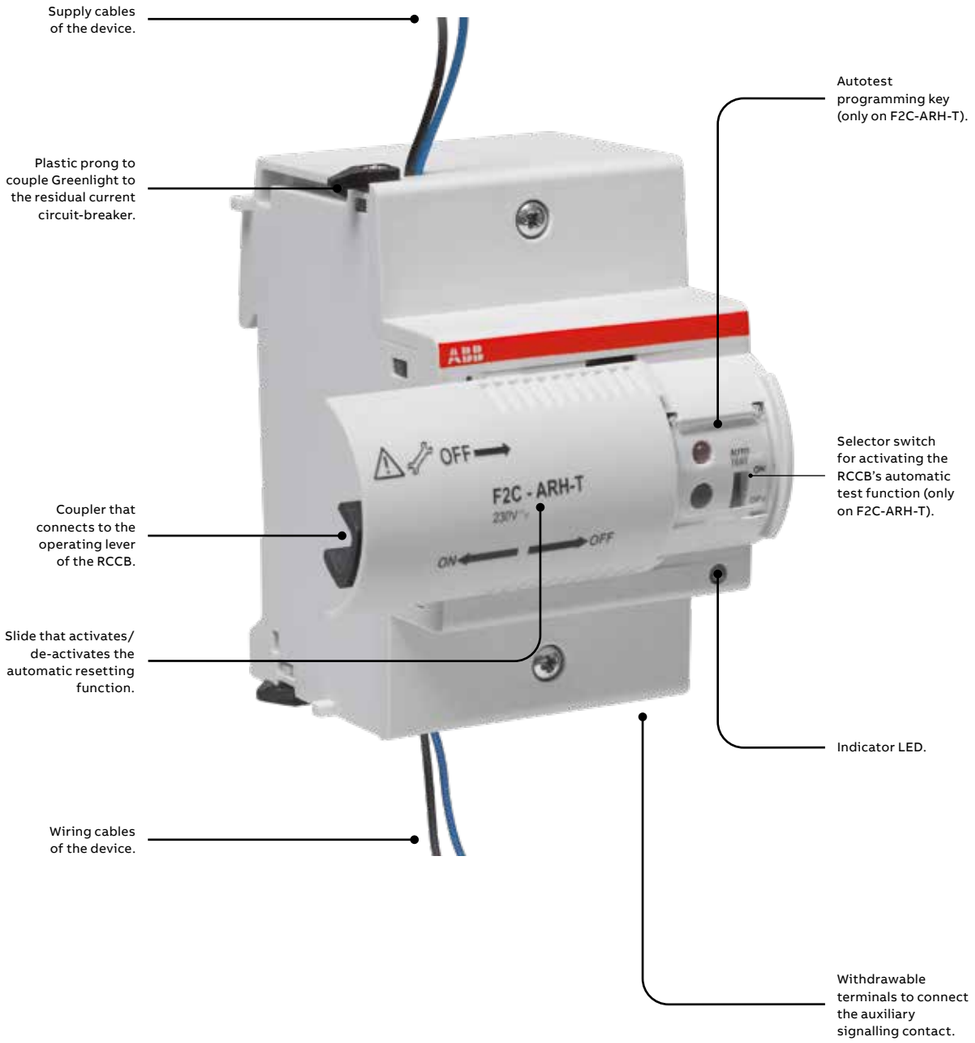

Installed downstream of the main circuit-breaker, LSS1/2 load shedding switch compares the actual power consumption of the system to a preset maximum permitted value, and prevents tripping of the main circuit-breaker by sequentially switching off a maximum of two non-prioritary loads (NPL1 and NPL2) when the preset threshold is exceeded. A green LED indicates the presence of the supply voltage, and two red LEDs indicate the load OFF conditions. At preset time intervals, the device automatically attempts to reconnect the previously disabled loads.

E 235 mains disconnection relays – Bioswitch – constant exposure of electrical interference fields originating from live conductors – as is the case e.g. in bedrooms – which may impair the well-being of people.

LEE 230 extractable power failure signalling lamp is an automatic electronic lamp that can be installed in any modular socket or wiring accessory socket conforming to the German VDE Schuko standard, to the Italian standard P11 10A, or to the 10/16 A Italian dual standard. The device functions both as a power failure signalling lamp and as a lighting device, to be used for example during maintenance activities or when seeking faults in the panel.

F2C-ARH and F2C-ARH-T.
The details make the difference

The characteristics and assets of an efficient and reliable product

Wiring
Greenlight auto-reclosing units are delivered already wired and ready to be installed and connected. You only need a screwdriver to turn the hooks that fasten it to the circuitbreaker and to tighten the terminals. The four wires of the Greenlight device are specially designed to be simply and reliably connected to the rear terminals of FH202 30 mA / 100 mA residual current circuit-breaker.

Set-up
Just a few minutes for the assembly, connection and programming procedures: Greenlight can be activated within an exceptionally short time. The operations are so simple that there is absolutely no room for error and the first autotest (available on F2C-ARHT), already included in the start-up procedure, allows you to immediately make sure that the system is working in an efficient and reliable way.

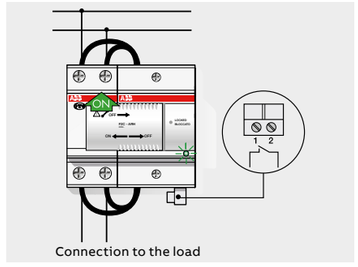

Autotest programming (only on F2C-ARH-T)
Once Greenlight with autotest has been assembled and connected, just power it, close the residual current circuit-breaker and move the slide towards the left to free the programming button. The red LED alongside the programming button will flash to indicate that the autotest needs to be programmed. Keep pressed the programming button for three seconds. The red LED light will become fixed and the device will perform the first test. The test will be repeated, at the same time of day, every six months.

Delay time (only on F2C-ARH-T)
A simple programming system allows you to delay the time at which the test is performed in relation to the time when the autotest system was activated. A five, ten and fifteen hour delay can be obtained by releasing and pressing the programming key once, twice or three times when the red LED light has become fixed after having been pressed the first time.

Colour	State	Auxiliary contact	Meaning
None	Off	Open	Greenlight not powered
Green	Flashing	Open	Greenlight powered and auto-reclosing not activated
Green	Fixed	Open	Auto-reclosing activated
Red	Flashing	Open	Inspection of the installation after the RCCB has tripped
Red	Fixed	Closed	Greenlight has blocked owing to a permanent fault in the line
Orange (only on F2C-ARH-T)	Fixed	Open	The RCCB automatic test has given a negative result: call an electrician

LED light
The multicolored LED on the front of the Greenlight device informs the user at a glance when the system is in the normal condition: if the reclosing system is activated, if the system is being tested because the residual current circuit-breaker has tripped, if the device is in the blocked status owing to a permanent fault in the installation and, lastly, if the residual current circuit-breaker has not passed the automatic test (only F2C-ARH-T) and maintenance work by an electrician is required in order to inspect.

Signalling contacts
A signalling contact allows the device to signal faults by remote control. For example, in combination with a telephone actuator (ATT-22) it can transmit information to a mobile phone to warn the user that the residual current circuit-breaker has tripped and that Greenlight has failed its reclosing because it has detected a fault in the installation.

E 450 priority switches

—
E 451-5,7A
2CSC400030F0126

The priority switch is used in wiring systems where existing lead cross sections or the size of the power supply service box do not allow for simultaneous operation of two powerful loads (e.g. storage heating and flow-type heater).

The priority switch disconnects the long-term load (storage heating) for as long as the short-term consumer (flow-type heater) is switched on.

The coil of the priority switch is connected in series to the short-term load. When this load is switched on, the NC contact of the priority switch disconnects e.g. the heating system contactor.

E 235 mains disconnection relays – Bioswitch

Constant exposure of electrical interference fields originating from live conductors – as is the case e.g. in bedrooms – may impair the well-being of people, experts say.

With the extra base load adapter E235-GLA, the mains disconnection relays can be switched on manually.

For the permanent installation of loads that switch on independently of the supply voltage, such as fluorescent lamps, a E235-GLE PTC base load element is available.

Energy savings, safety gains
Keeping all the factors in view

ABB is the world-leading provider of smarter home, smarter building and intelligent community solutions. Its complete offering can help to achieve significant reduction of energy budget through an accurate monitoring and control of every parameter of the building: heating temperature, lighting, energy consumption of electric appliances can be adapted to actual needs, with a substantial saving potential without compromising comfort, safety or quality of life.

Commercial and residential buildings account for a big part of global end-user energy demand. ABB's solutions can help to achieve savings through an accurate monitoring and control of electric loads such HVAC systems, lighting installations and appliances.

The modular DIN rail electricity meters offer a wide range of programmable functions useful to measure electricity consumption and reduce energy costs. The line of DIN-mounted electricity meters and the wide range of communication adapters make sure to provide the perfect solution for every application.

Control loads operations in a system improves functionality and optimize power consumption. Programming the control of electric appliances according to the needs of each application obtains measurable advantages in terms of comfort and reduction of power wastage.

The range of ABB's modular analog and digital time switches includes several functions that guarantee the opening and closing of electrical circuits according to a scheduled program. AG analog time switches are available in both daily and weekly versions, with 16 A contact which can be operated according to a timing program. Some versions are equipped with a built-in battery, generally charged by the network voltage, which enables them to maintain the timing function even in case of lengthy power supply failures.

DBT digital time switches ABB are equipped with a permanent EEPROM memory to ensure that the scheduled timing is followed and the date and hour settings are maintained even in case of power down. The range, used for both daily and weekly programming, includes single/double channel versions with a change-over contact and a switching capacity of 16 or 10 A. Some time switches can be combined with DT-DCF antenna for automatic synchronization with Frankfurt official time. New features include a holiday mode that allows forcing of the ON-OFF output for a certain period, a random mode used to simulate event presence, and a waiver mode to carry out waivers remotely or locally.

Rationalization of the light consumption is very important.

To command the lighting in stairs of buildings, ABB offers the time-delay switch E 232. The switch includes an electro-mechanical timer with a synchronous motor drive to ensure high operational safety in whatever mounting position. The time range is adjustable in increments of 15 seconds from 1 to seven minutes. Devices include an integrated warning feature (warning by blinking) according to DIN 18015-2 as well as a 60 minute long-time function.

For lamps control, ABB's TW modular twilight switches allow to switch on and off lighting devices according to a scheduled level of ambient light. They are used in combination with a sensor to detect if the ambient light is higher or lower than the set level. TW2/10K, equipped with three different types of adjustment range (2:100, 2:1000, 2:10000), fits the daylight applications where Lux values are very high. This range addresses all applications, for example shop windows, parking areas and so on.

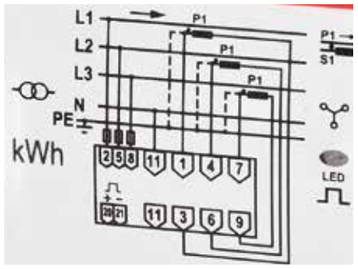

Hour counters – as E 233 series – offer a very important function for energy budget improvement. They are used to record operating times as well as to determine idle times and off times of electric loads in commercial or domestic installations, with an immediate feedback on energy consumption.

In terms of energy quality, modular digital instruments of VLMD and AMTD series measure voltage, current and frequency. The range is composed by a voltmeter for a.c./d.c. voltage monitoring, ammeter for a.c./d.c. currents, and frequency meter. Ammeters measure in indirect insertion thanks to measuring accessories, like current transformer for a.c. and shunt for d.c. The full scale is programmable by the user.

Electricity meters

The details make the difference

The DIN rail mounted electricity meters are available in single phase C11, B21 and A41 for direct connection and A42 for transformer connection.

For three phase direct connection there are the C13, B23 and A43, while B24 and A44 are for indirect connection.

There are five available functionalities for EQ meters with basic to advanced functionalities.

C-series are available with Steel Functionality that includes active energy of class 1, pulse or alarm output.

B-series are in Bronze, Silver and Silver categories. In addition to what is available in steel category, it is possible to import/export of energy in Bronze class and in Silver class it is also possible to have resettable register, optional class of 0.5S and fixed I/O's.

A-series are available in Gold and Platinum categories in addition to previous mentioned classes. Basic and advanced clock function, harmonics(THD) and configurable I/O's is available in these categories.

The EQ meters A-series and B-series offer flexible solutions for collecting data. This can be done via pulse output or serial communication interfaces such as M-bus, Modbus RTU and an Infrared port(IR). The meters can be integrated into InSite pro M compact® system , which can collect the data from meters and give a remote monitoring of system with the help of mentioned communication interfaces.

MID – Measuring Instrument Directive– means common testing rules based on IEC standards for all EU countries. You find a label certifying that the ABB electricity meter is tested and approved according to MID directive.

EQ meters B-series

The B-series are in single phase and three phase metering with direct connection up to 65A and indirect connection up to 6A.

The B-series meters are mounted on a DIN rail and are suitable for installation in distribution boards. They are suitable in applications where there is a need for reliable energy measurements and where space is limited.

Main characteristics include:
- Single and three phase metering
- Active energy, accuracy class B (Cl. 1)
- • Direct metering up to 65A and indirect metering up to 6A
- • LCD display
- • Pulse output or alarm
- • 4 tarrifs
- • IEC and MID type approval

The information shown on the display can be changed in the settings of the meter using the push buttons.

The push button used for changing settings can be sealed. The EQ meters B-series includes up to 4 tariffs options which can be changed by inputs, communication. All EQ meters B-series are tested and approved according to different standards. These standards covers all technical

aspects of the meter such as climate conditions, electromagnetic compatibility (EMC), electrical requirements, mechanical requirements and the accuracy.

Energy efficiency
EQ meters C-series

The C-series are compact meters available both in single phase and three phase for direct connected applications up to 40 A. The small size and the DIN rail mounting makes it suitable for installation in distribution boards and small standard enclosures. The power consumption of the meter is very low, less than 0.3W and 0.6W at 230V AC.

Main characteristics include:
- Single and three phase metering
- Active energy, accuracy class B (Cl. 1)
- Direct metering up to 40 A
- LCD display
- Pulse output or alarm
- IEC and MID type approval

EQ meters C-series have an LCD with large digits showing energy register and instrumentation values. Due to the compact design of the meters,1 and 3 modules are available. The meters have a wide temperature range which makes it possible to install the meter in many locations, -25°C ... ±70°C (storage -25°C ... ±80°C).

Navigating the meter is easily done via the push-button below the display. The C-series meters support reading of instrument values. A number of electrical properties can be read:
- Power factor
- Active power
- Current
- Voltage

C-series meters have one output that could be used as pulse output or as an alarm output.
They are type approved according to IEC and MID. MID is the Measuring Instruments Directive 2014/32/EU from the European Commission.
The type approval is according to standards that covers all relevant technical aspects of the meter.
These include climate conditions, electromagnetic compatibility (EMC), electrical requirements, mechanical requirements and accuracy.
MID versions have initial verification according to annex F of the Measuring Instruments Directive.

Ordering data
EQ meters A-series

A-series are advanced meters in single phase and three phase for active energy. They are designed for installation on a DIN rail in distribution boards and small enclosures. Key product features are internal clock for tariff handling and load profiles, configurable I/O and for direct metering up to 80A and indirect metering up to 6A.

Main specifications are:
- Single phase and three phase metering
- Active energy, accuracy class B (Cl. 1)
- Measure import/export energy
- Direct connection up tp 80A and indirect connection up to 6A
- Pixel-oriented display
- In-built M-bus or Modbus, pulse output and IR for SCA
- Internal clock for up to 4 tariffs and monthly values
- Memory back-up (EEprom)
- IEC and MID approval

The display is pixel-oriented and can show up to four quantities at the same time. Navigating the meter is easily done via the push-buttons which is protected against unauthorized use. The meters have up to 7 modules that saves space in the installation.

The operating temperature range is from -40°C to +70°C (storage +80°C).

A-series have 4 ways to communicate depending on the type:
- In-built M-bus or Modbus (RS485)
- IR interface for serial communcation (together with the serial communication adapter)
- Pulse output
- Front display

It is possible to choose information shown on the display and change the settings in the meter using the push buttons.

The push button used for changing settings can be sealed. The EQ meters A-series includes up to 4 tariffs options which can be changed by inputs, communication or internal clock.

Ordering data
InSite pro M compact® System

System pro M compact® InSite is a solution in range of connected devices to support energy and asset management in electrical distribution.

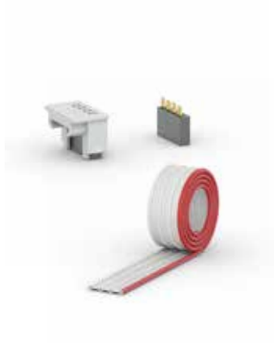

The solution delivers highest data security standards as well as continuous upgrades thanks to regular firmware updates.

SCU100 is a control unit, that has been specifically developed to allow users to better manage energy and assets in sub distribution boards. It can gather data up to 16 energy meters and in addition to 96 current sensors.

Remotely monitoring of the system is made possible by a digital communication that supports different protocols: Modbus RTU, TCP. Its built-in web server offers intuitive access to the measured data, the configuration settings and the system parameters, providing one unique interface for both operations and commissioning process. The two interfaces – LAN (TCP/IP or Modbus TCP) and RS485 (Modbus RTU) – guarantee straightforward integration into any IT infrastructure.

To enable monitoring and control of the complete energy distribution system, the range is completed with a flexible choice of input and output modules, which can be easily connected to ABB's System pro M compact® accessories of MCBs and RCDs, as well as other DIN-Rail products with digital inputs or outputs.

Available functionalities are in range of simple monitoring of the installation to advanced analysis of historical data, customized alarms and implementation of automated actions to reduce energy consumption, identify potential risks and ensure operational continuity.

Accessories
The Sub-distribution Control Unit needs a flat cable to gather information from current sensors and digital I/O modules. The flat cable should be a 4-pin cable, flexible in length. Devices can be placed at customizable distances required by the specific application.

Sub distribution control unit	Technical feature	Unit	Description
	Supply voltage	[VAC]	80-277 (L1-N, +5%)

AG Timer electro-mechanical time switches

These analog timers are designed for installation on DIN-rail. They control circuit opening and closing according to the scheduled program. Available both on daily and weekly versions and equipped with a 16 A contact. They can be set on the scheduled program or on the permanent ON-OFF function. The AD1NO-R-15m, AD1CO-R-15m, AW1CO-R-120m, AD1CO-R-30m, AW1CO-R-210m versions are equipped with a built-in battery, charged by the network voltage, which allows the devices to maintain the set time also in case of long (up to 150 h) power supply failures. The products fit applications such as control of lighting systems of shops or commercial buildings, heating and ventilation systems as well as control of automatic irrigation systems of private or external gardens.

DBT Timer digital time switches

The unique design, with white back-light LCD display, and extreme ease of use with only four buttons, make DBT Timer ideal to automate the installation functions. The possibility to configure all digital devices via DBT Timer APP and Bluetooth connection makes the configuration and installation time even shorter. Add this paragraph as well in case you have enough space, otherwise skip the follow part:
All functions and programs can be set on the device, and for the first time the device can also be programmed via app. This not only facilitates commissioning, but also ensures maximum flexibility. The range includes 1 and 2 channel versions, equipped with large capacity internal battery to maintain operation without power supply and permanent memory EEPROM, to avoid the risk of program loss and to maintain the date and time settings in the event of power failure, irrespective of its duration. The D Line is particularly useful in environments and situations where user management is required with a time schedule flexible enough to predict or exclude activities according to time and day of week or month.

E 232 staircase lighting time-delay switches

Staircase lighting time-delay switches are usually operated by pushbuttons, often fitted with a glow lamp. Switches are designed for a glow lamp current of up to 150 mA and thus perfectly suitable for installations in multi-storey buildings.

The E 232-230 staircase lighting time-delay switch includes an electro-mechanical timer with a synchronous motor drive to ensure high operational safety in whatever mounting position. The time range is adjustable in increments of 15 seconds from 1 to seven minutes. Resettable after 30 seconds.

E 232E–230N and E 232E-8/230N devices feature electronic time delays. A high switching capacity, 150 mA glow lamp current parallel to the pushbuttons, steplessly adjustable time range from 0.5 to 20 min, as well as low switching noise make these devices so special.

Devices of the E 232E-230 Multi 10 and E 232E-8/230 Multi 10 series are multi-functional products with 10 functions to choose from that can be adjusted from the front. Through an electronically controlled connection of the load at voltage zero, a very high switching capacity of 3,600 W (load of filament lamp) is reached.

The devices include an integrated warning feature (warning by blinking) according to DIN 18015-2 as well as a 60 minute long-time function.

The E 232E-8/230N and E 232E-8/230 Multi 10 staircase lighting time-delay switches offer an additional metallically separated control input for 8 ... 240 V AC/DC.

Control and automation
T Line twilight switches

TL1

T Line modular twilight switches

TL1 twilight switch allows to switch ON and switch OFF lighting devices according to a scheduled level of the ambient light. It is used in combination with an external sensor to detect if the ambient light is higher or lower than the set level . A switching delay prevents them from operating unnecessarily when the light intensity suddenly changes (e.g. lightning, moving vehicles, etc.). The TL1 twilight switch 1 channel is preset with a 10 LUX from factory and it is equipped with 2 signalling LEDs that indicate the setpoint value and display the status of the contact . The operating instructions are printed on the side of the product.

TLs

Accessories for T Line modular twilight switches

The external sensor TLs is supplied in the same package of the switch,TL1, but it's also available separately as spare part. The upper part of the external case (with screw locking), made up of thermoplastic material, bears up against ultraviolet rays to guarantee an homogeneous diffusion of the daylight internally. The sensor is also equipped with a cable gland.

TL1 Pole mounting twilight switch

The TL1 Pole version is designed for installation on the pole/wall, with photocell inputs and integrated cabling including cable gland seals to ensure a high protection degree. Thanks also to the high quality, TL1 Pole provides excellent resistance to atmospheric agents and a long service life. TL1 Pole is also internally equipped with a preset sensor of 10 LUX. The sensor is extractable from the base and allows an easy and efficient maintenance without needing further wiring. TL1 Pole is the ideal solution to manage the external light systems such as the public ones, more precisely, in cases where there is a need of controlling the lighting of public or private roads, gardens, courtyards at the decline of solar radiation during twilight.

DWA twilight astronomical switches

The astronomical switch DWA1with 1automatically control lighting circuits depending on the time of sunrise and sunset, greatly increasing energy efficiency. The programming is in fact based on a mathematical algorithm able to calculate the time of the rising and setting of the sun in a certain location for each day of the year. Once powered the device, simply insert date, time, geographical coordinates and time zone so that it is ready to work. These settings can also be automatically defined using the DBT Timer APP. The installation of astronomical digital time switches is particularly useful when using a twilight switch with external sensor is not recommended because it may be subject to malfunctions caused by air pollution, excessive brightness or vandalism. DWA1 is also indicated for the control of public lighting, shop windows of shops, neon signs, monuments, facades, illuminated fountains, …

VLMD, AMTD digital instruments with alarm relay

The range comprises one voltmeter and one ammeter that display and monitor a value, tripping a relay contact and signalling the alarm condition if it over- or undershoots a programmable threshold. The alarm threshold as either a minimum or a maximum limit, the peak maximum and minimum values measured are stored in the non volatile instrument memory.

The contact type is NO, so that the contact is open when the instrument is powered off, but it is possible to obtain positive safety operation via a software setting which determines whether the alarm condition is with an open or closed contact.

The instrument with relay can be used as either a minum or maximum relay, but not for both functions simultaneously

MISTRAL41F
Endless installation possibilities

Reliable technology combined with a modern decorative look in a compact, elegant design.

Door opens up to 180° allowing full access to the interior of the unit.

In the flush-mounted version the depth of the base box ensures a perfect balance between internal space and the possibility of installation in thin walls.

The symmetrical design allows opening of the reversible door either from the left or from the right.

Door available in two versions: petrol blue and opaque.

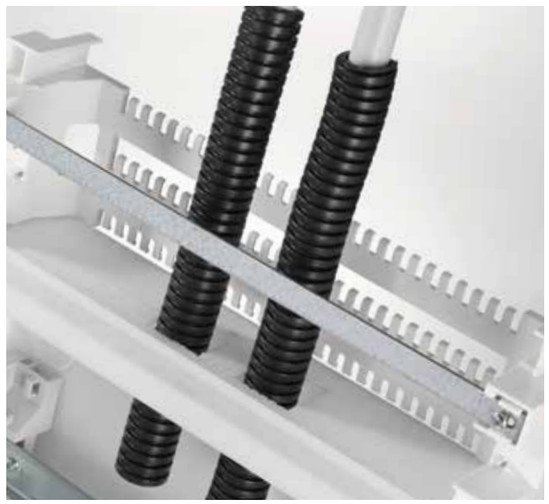

Endless installation possibilities

Horizontal coupling
The consumer units can be coupled side by side with the horizontal junction unit accessory, protecting the passage of cables between adjacent units.

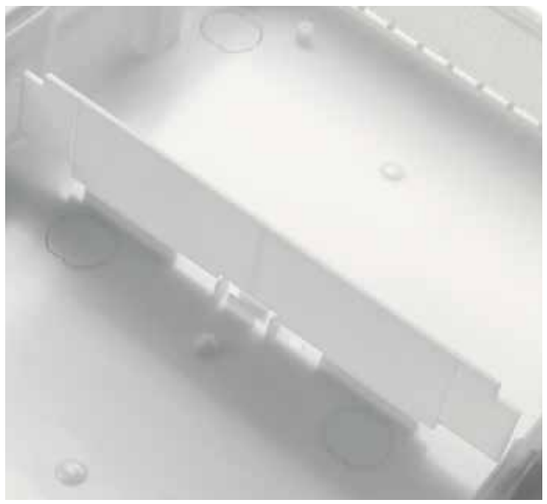

Mortar guard
All versions include a mortar guard that prevents mortar sprays inside the consumer unit.

Dual-function accessory
A single accessory performs a dual function. It can be used to fix pipes to the unit's housing or to vertically couple two consumer units.

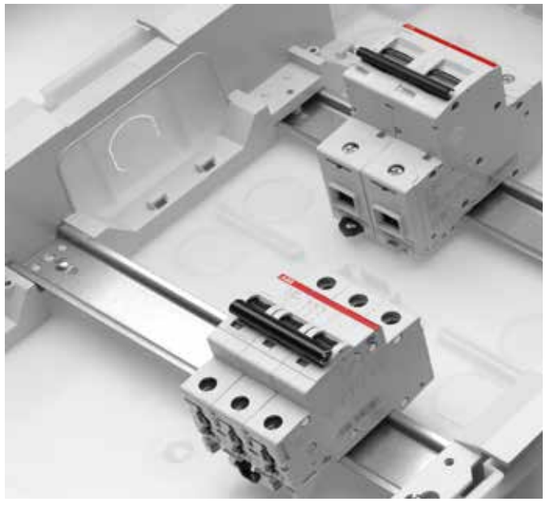

Internal partition
The horizontal partition allows the interior of the unit to be divided into two parts.

Endless installation possibilities

Flanges
The flange with multi pre-cuts is designed to be sheared only where necessary in order to ensure a more secure fastening. The removable flange with knockout holes ensure a reliable and safe placing of flexible pipes and other conduits, especially in plasterboard installation.

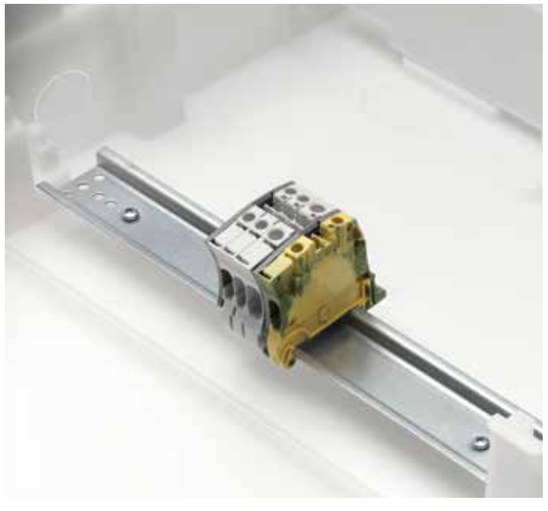

Two DIN rail positions
The extraxtable frame offers two DIN rail positions so devices of different depths, like S200 or S800 miniature circuit breakers, can be installed in perfect alignment.

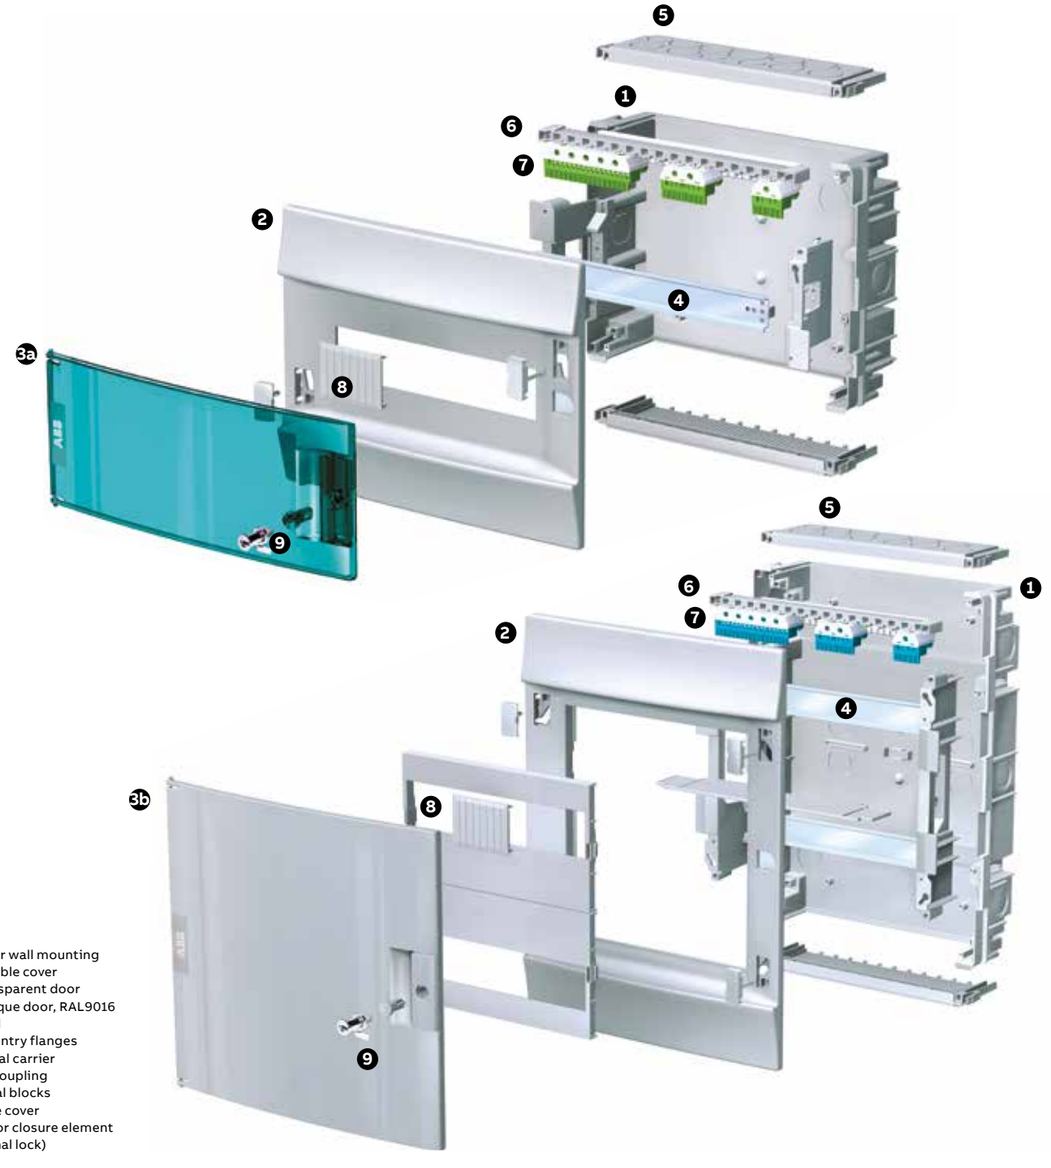

Captive screw covers
Screw covers are hooked to the front panel so they can be removed without the risk of losing them.

DIN rail terminals
It is possible to install an extra DIN rail at the bottom of the consumer unit.

A versatile range suitable for every application

The simple construction of the MISTRAL41F series makes the units fast and easy to assemble. What is more, the flexible design allows easy adaptation to various application requirements.

1. Base for wall mounting
2. Reversible cover
3. a) Transparent door
   b) Opaque door, RAL9016
4. DIN rail
5. Cable entry flanges
6. Terminal carrier
7. Quick coupling terminal blocks
8. Module cover
9. Finish or closure element (optional lock)

A versatile range suitable for every application

Horiziontal levelling
The external adjustments of the front cover assure a perfect horizontal levelling even if the consumer unit is slightly crooked.

New generations terminals
The MISTRAL41 range of consumer units is supplied with a wide, completely new ABB terminal block range. Three different versions offer screw and spring fast coupling for easy and effective cabling up to 63A or 100A.

Hollow wall mounting
For the hollow wall mounting our consumer units provide a special enclosure and hollow mounting screws.

A smarter space for your installation ideas
MISTRAL41F

When it comes to flexibility, usability and design our Mistral41 consumer units can convince installers as well as end users in almost any kind of electrical distribution system in industrial, commercial or residential environments.
A variety of innovative details make the MISTRAL41 series the perfect solution to realize all your installation ideas efficiently – now or in the future.
Choose from a brick walll or hollow wall version to meet your individual needs.

IP 40 panel fronts

Technical characteristics
- protection degree **IP 40**
- in **thermoplastic**, self-extinguishing and resistant to abnormal heat and fire up to 650 °C (glow wire flammability index) in compliance with IEC 60695-2-11 Standard
- available in **RAL 7035 grey**
- installation temperature from -25 °C to +60 °C
- resistant to heat: ball thermopressure up to +85 °C in compliance with EN 60695-10-2 Standard
- fronts are supplied with:
  - module covers
  - instruction sheet

IP 55 panel fronts

Technical characteristics
- protection degree **IP 55**
- available with transparent, smoky horizontally hinged door in the version with lock and lead-sealable spring
- door designed to take a lock with coded key code 12 865
- available in **RAL 7035 grey**
- in **thermoplastic**, self-extinguishing and resistant to abnormal heat and fire up to 650 °C (glow wire flammability index) in compliance with IEC 60695-2-11 Standard
- installation temperature from -25 °C to +60 °C
- resistant to heat: ball thermopressure up to +85 °C in compliance with EN 60695-10-2 Standard
- shock resistance 6 Joules
- fronts are supplied with:
  - module covers
  - instruction sheet

UK600 Flush-mounting Series
Consumer units

Snap-on cable inlet with integrated terminal fixture allows easy insertion of incoming and outgoing cables and uses a quick, single-hand-operated push and-stay design, resulting in 80 % more cable inlet space. Both cable inlets can be screwed tight when in-stallation is complete.

The generous wiring space considerably facilitates installation works for up to 200 % more wiring space and “slide in” wire holder.

All enclosures of the UK600 series are suitable for hollow-wall installation. Upgrading is incredibly quick and simple – just as easy as the hollow wall installation itself. You just need the UZ91P4 hollow wall set for UK600. No screws, yet nothing can slip. Fastening it is as easy as fastening cable ties.

Time-saving installation thanks to intelligent plug-in technology. The N/PE terminals which are laterally assembled provide a high level of flexibility. There are also versions available with screw-type terminals.

An innovative connection set for horizontal and vertical connection of several combi enclosures enables flexible extension and combination options.

The stable, removable device support can be snapped in and is installed quickly without tools. Here too, a vari-ety of common installation techniques have been catered for – the device support can also be fixed in position using screws.

The triple socket makes the connection of different power supplies very easy. it offers 120° swiveling and can be snapped onto cable inlet.

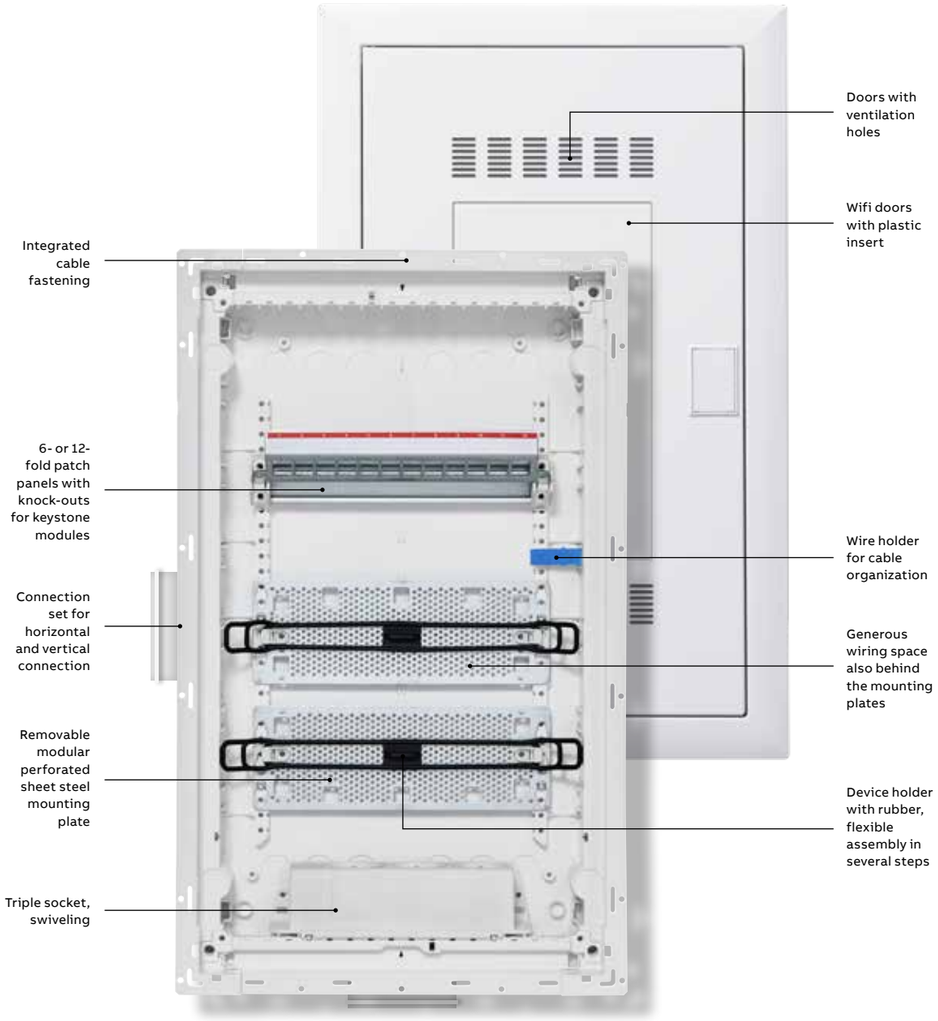

With the new media enclosure all conceivable devices such as routers or media modules find a safe space. The innovative combi enclosure combines the media and the consumer unit in one single cabinet, with a flexible partition separating the two parts from each other.

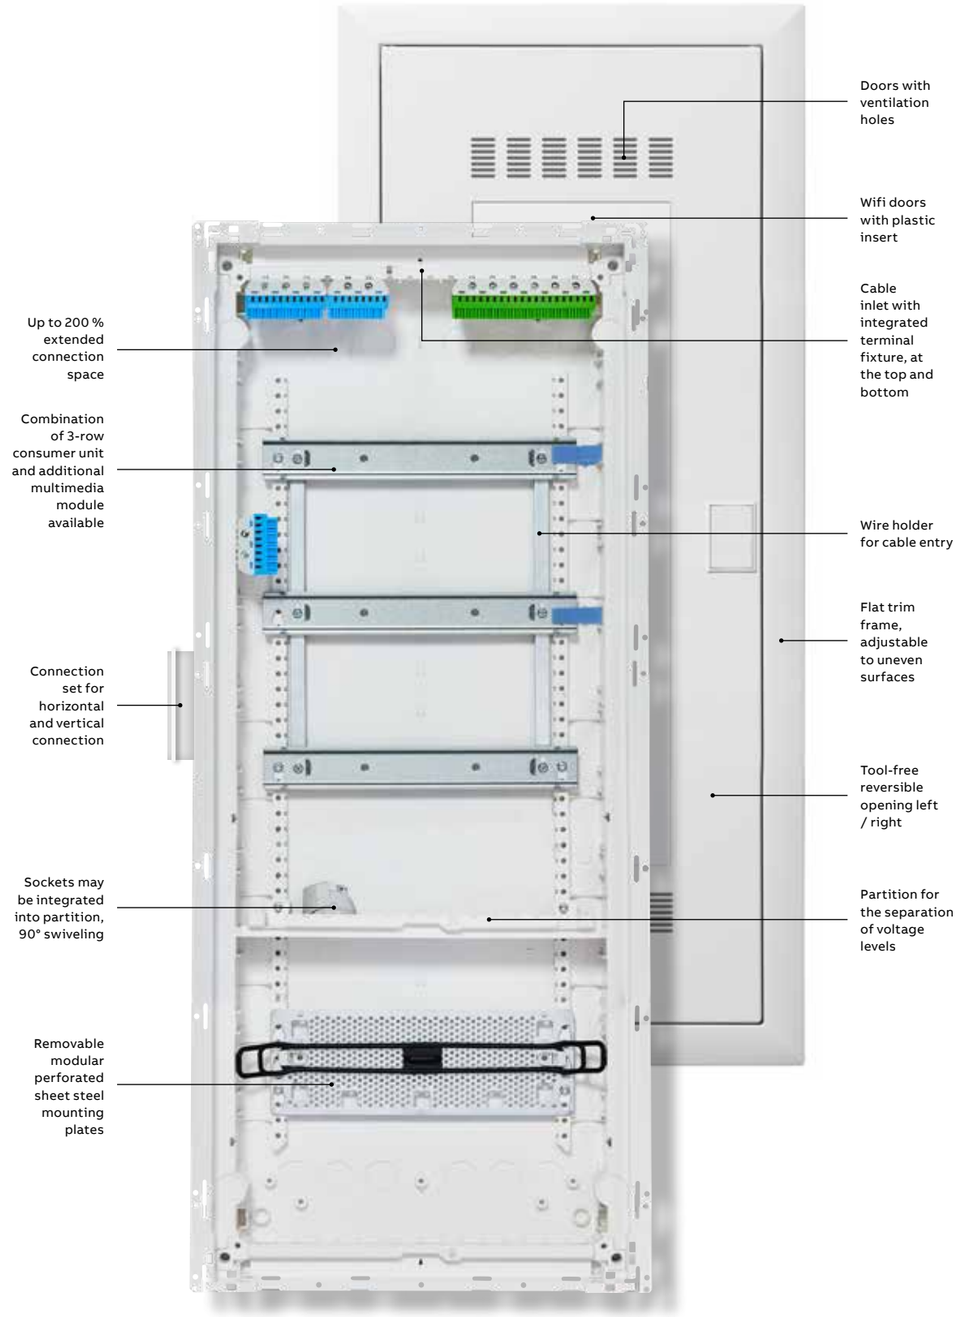

An attractive design feature – a perfect example of how easy it can be to combine functionality with design. The variety of high-quality doors and frame designs make the UK600 consumer units and media enclosures a design element in every living space. Media doors are available as Wifi-friendly and ventilated versions.

N/PE quick-terminals

Standardized, future-oriented and flexible

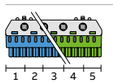

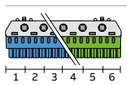

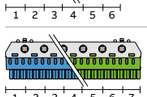

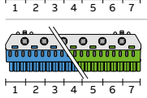

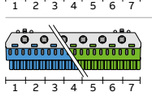

Configure based on your needs
The modularity and the extensive range of products allow customizing the products to the needs based on real-world use. Various quick-terminals can be combined on one quick carrier as necessary. If a larger N or PE terminal has to be used, simply connect two quick-terminals using the ZK10P10 connecting bridge.

Product benefits

- Flexible terminal system for several N potentials: Screw connections: 2.5 to 25 mm² for rigid conductors; for flexible conductors up to 25 mm² (wire end sleeves required)
- Spring connection: 1.5 to 4 mm² for rigid conductors; for flexible conductors up to 25 mm² (wire end sleeves required)
- Optimal when using several residual current circuit breakers
- Ease of expansion using connecting bridges
- Precise assignment of the terminals by clear colour coding: N = blue, PE = yellow-green
- Easy labelling of the terminals using pre-printed, self-adhesive number strips
- Wide range of applications: may be used in the UK600 and MISTRAL65 consumer unit series, in all compact distribution boards, and with all meter cabinets, wall-mounting and floor-standing cabinets

Consumer units
Screw terminals
Standardized, future-oriented and flexible

Configure based on your needs
The modularity and the extensive range of products allow customizing the new products to the needs based on real-world use. Various terminals can be combined on one common carrier as necessary.

Product benefits
- Flexible terminal system for several N potentials: Screw connections: 1.5 to 16 mm² for rigid conductors; for flexible conductors up to 16 mm² (wire end sleeves required)
- Optimal when using several residual current circuit breakers
- Precise assignment of the terminals by clear colour coding: N = blue, PE = yellow-green
- Easy labelling of the terminals using pre-printed, self-adhesive number strips
- Wide range of applications: may be used in the UK600 and MISTRAL65 consumer unit series, in all compact distribution boards, and with all meter cabinets, wall-mounting and floor-standing cabinets

Media enclosure UK600

With and without trim frame and door

Flush-mounted consumer units – UK600, IP30 - , ; *
Consumer units UK600 as multimedia version,
dimensions according to the standard enclosures as per DIN 43871
Mechanical impact strength: IK07
Available in 2 up to 5 row versions as flush-mounted consumer units
Can be upgraded for surface-mounting or partially recessed mounting
Upgradeable for hollow-wall-mounting using UZ91P4
Wall box:
- non-warp, break-proof, non-flammable, low-halogen plastic
- with cable strain relief comb
- with detachable cable inlets
- combinable
Reversible opening (tool-free)
Communication channel for horizontal and vertical connection
With removable DIN rail in the top row
Patch panel in isolated design for up to 12 keystone modules
Modular perforated sheet steel mounting plate for devices
Simple and tool-free installation of the devices using the "device strap"
120° swiveling triple socket for the power supply of built-in devices
Wire holder for professional cable organization
With trim frame and sheet steel doors as sheet steel door with white plastic insert, for improved Wifi signals or as
basic option without trim frame and door

*in connection with hollow-wall-mounting set UZ91P4

Mini EUROPA40

Wall-mounting covers without door IP40

Available in white and grey and three different sizes to accommodate 2 to 6 modules.

The particularly robust and shock resistant frame ensures complete protection of the equipment installed.

The range is manufactured in accordance with the IEC 60670-24 standard.

Each cover is equipped with a DIN bar.

This consumer unit without door reachs IP40.

The upper and lower walls include precuts on the internal side for the passing through of wiring trunking.

These covers can be opened from the front side to ensure easier access during installation.

Technical characteristics

Protection degree: IP40.

Colour: RAL 9016 red and RAL 7035 grey.

Material: manufactured in self-extinguishing thermoplastic resistant to abnormal heat and to fire up to 650°C (glow wire test), according to IEC 60695-2-11 standard.

Installation temperature: -25°C ÷ +60°C.

Shock resistant: 6 joule (with mounted circuit breakers).

Conformity: IEC 60670-24 certification.

MISTRAL41W
Wall-mounted series

The MISTRAL41W series of consumer units gives installers the freedom and flexibility to implement any type of electrical distribution system in residential buildings. This wide range of wall-mounted, IP41-rated units has been designed from scratch to enhance the unique features that make ABB the leading industry standard.

The units are fast and easy to install and look great anywhere thanks to their elegant design. Furthermore, ample internal space, a choice of doors and a unified range of accessories offer endless possibilities to create high-quality work installers can be proud of.

MISTRAL41W
Endless installation possibilities

Fast and easy to be installed. Design and simplicity “all in one”.

Concealed rear mounts for secure wall installation.

Door opens up to 180° allowing full access to theinterior of the unit.

Door available in two versions: petrol blue and opaque. Units without doors are also available.

The symmetrical design allows opening of the reversible door either from the left or from the right.

Endless installation possibilities

Invisible cable entry and exit
Pre-cut knockout slots allow cable entry and exit from the top and bottom. When not used, the slots remain invisible on the outside maintaining the consumer unit's sleek look and feel.

More than enough internal space
Lots of internal space makes cabling even easier. Cable clips and holes allow wires to be fastened to the frame with simple cable ties.

Double insulation protection
The unit housing and all accessories have been designed and developed to ensure Class II double insulation protection.

Multi-row units
Multi-row units are available with a standard distance of 125 mm between DIN rails.

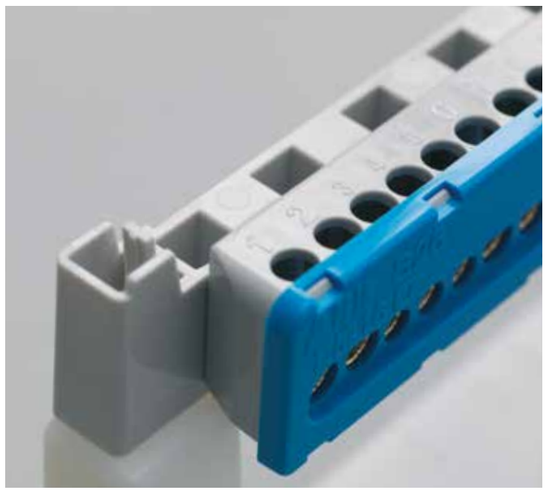

Easy installation of extra modules
An extra module can be added by removing two pre-cut elements. This offers a quick and easy solution when unexpected additional installation is required.

Fast and tidy cabling
Various snap-on terminal blocks for N and PE connection be installed in the upper and lower part of the unit. Two versions offer screw or spring couplings.

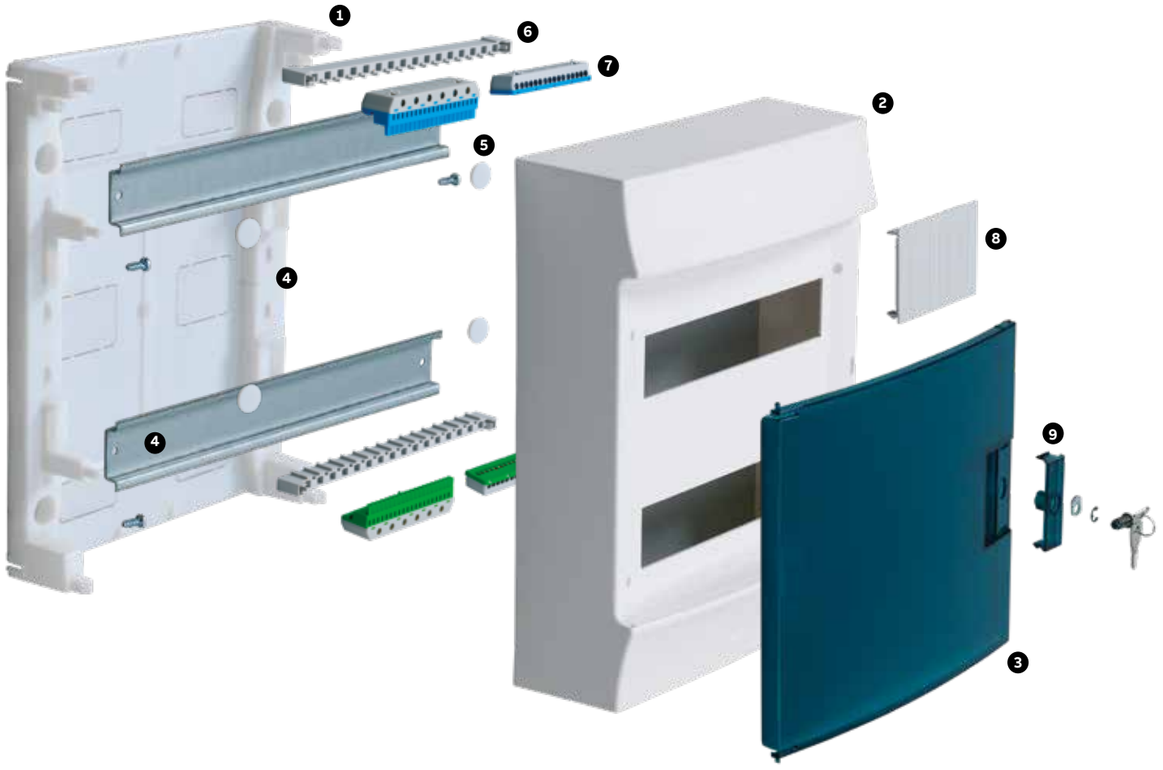

Optional door lock
The standard door with ergonomic handle is available with a lock for added security.

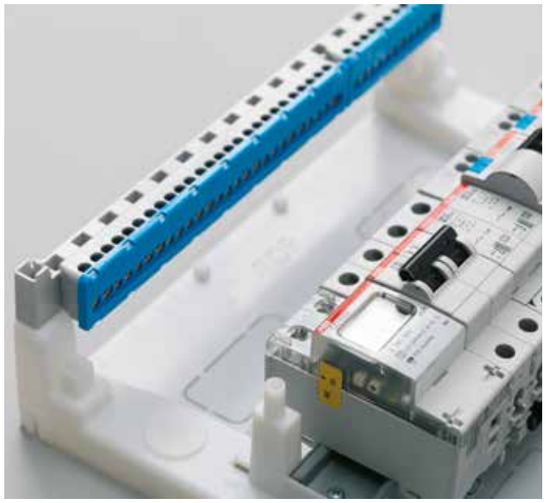

New generation terminals
The MISTRAL range of consumer units is amended with a wide, completely new ABB terminal blocks. Two different versions offer screw and spring fast coupling for easy and effective cabling up to 63A or 100A.

A versatile range suitable for every application

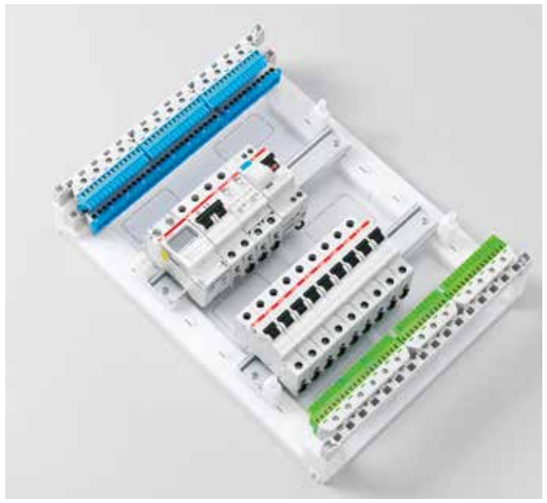

The simple construction of the MISTRAL41W series makes the units fast and easy to assemble. Furthermore, they can be easily adapted to various application requirements thanks to their flexible design.

1. Base for wall mounting
2. Reversible cover
3. Transparent door
4. DIN rail
5. Plugs, protection class II
6. Terminal carrier
7. Quick coupling terminal blocks
8. Module cover
9. Finish or closure element (optional lock)

A unified range of products
The MISTRAL41W series is compatible with a unified range of ABB products. As a result, terminal blocks, circuit breakers, switches, surge protective devices and many other components can all be installed in the units for a wide variety of applications.

3 different terminal systems available
A new generation of terminal blocks is available in different colours, wide range of sizes and two different connection options.

MISTRAL65
Endless installation possibilities

Invisible cable entry and exit
The MISTRAL65 (GWT 650) comes with smooth surfaces for the cables entry on top and bottom. The MISTRAL65 (GWT 750) version is provided with knockouts of various dimensions.

More internal space
Internal spaces have been created to make cabling even easier, with cable clips and holes for fastening wires to the frame with simple cable ties.

Easy installation of extra modules
Additional modules can be installed by removing two pre-trimmed elements. This offers an easy and tidy solution when there are unforeseen installation requirements.

New generation terminals
The new MISTRAL range of consumer units is amended with a wide, completely new ABB terminal blocks. To different versions offer screw and spring fast coupling for easy and effective cabling up to 63A or 100A.

MISTRAL65
Endless installation possibilities

Protected trunking entry
The new polycarbonate accessory for trunking entry can be positioned at the top or bottom of the consumer unit, connecting and protecting the conductor bundles. A series of internal knockouts allows it to house any type of trunking.

Aesthetically clean installation
Interior slots allow the unit to be fixed to the wall at points that cannot be seen from the outside, making for an aesthetically clean installation. Special snap-in closure plugs guarantee class II protection (double insulation).

Horizontal coupling
The consumer units can be installed side by side, with cable gland accessories protecting the conductors' path between adjacent units.

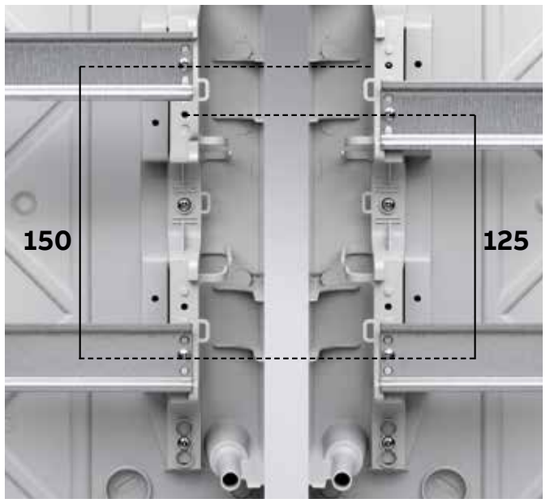

Blind panels for small automation application
Accessories include blind panels and base plates allowing the installation of other types of devices, in addition to modular DIN-Rail products, like contactors, motor starters or devices on the front of the panel.

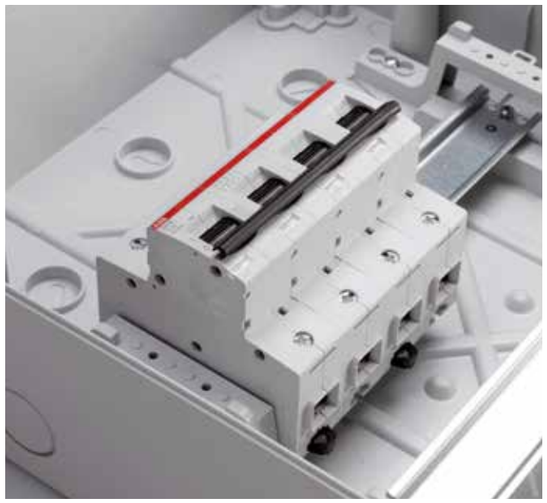

Optional door lock
The standard door with ergonomic handle and snap-on closure can be supplied with a lock and key on request. This ensures only authorized people have access and prevents tampering or incorrect operation.

Variable distance between DIN-Rails
To create space at the top or bottom of the consumer unit, the central distance between the DIN-Rails can be modified from the standard 150 mm to 125 mm. The front panel can be removed, reversed and re-installed with a simple click.

Two DIN positions
The frame has two DIN-Rail positions so accessories of different depths, like MCCBs, can be installed in perfect alignment.

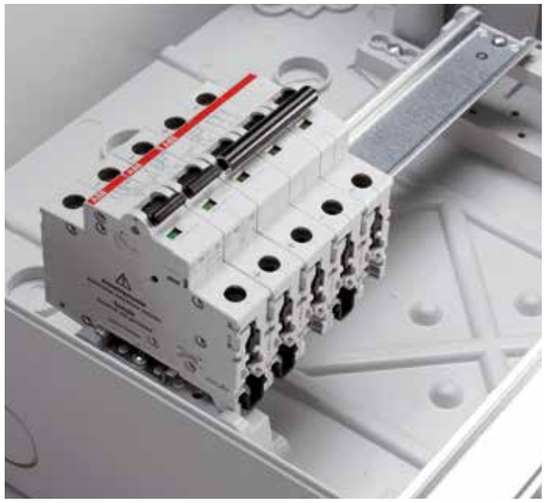

Easy installation of non-standard devices
The flexibility of the frame allows easy installation of devices with above-standard depth like high-performance MCBs.

MISTRAL65
Endless installation possibilities

Compatible with standard modular devices
The first depth allows the installation of standard products. These include most modular devices currently on the market.

Non-modular equipment
Accessories like blind panels and base plates enable the installation of other types of devices, in addition to modular DIN products, on the front of the panel. These include control buttons and indicator lights.

Terminal block PE 9 x 16 mm²+12 x 6 mm²	100	1SPE007715F0744	41Z65	5/90
Terminal block PE 11 x 16 mm²+15 x 6 mm²	100	1SPE007715F0745	41Z66	5/90

MISTRAL41 – Terminal blocks screwless

Description	Maximum current [A]	Order code	Type number	Packaging
Terminal block screwless				
Terminal block screwless N 5 x 1,5–4mm²	63	1SPE007715F9701	41Z70	5/280
Terminal block screwless N 5 x 1,5–4 mm²+1 x 25 mm²	63	1SPE007715F9702	41Z71	5/180
Terminal block screwless N 8 x 1,5–4 mm²+2 x 25 mm²	63	1SPE007715F9703	41Z72	5/150
Terminal block screwless N 11 x 1,5–4 mm²+3 x 25 mm²	63	1SPE007715F9704	41Z73	5/100
Terminal block screwless N 14 x 1,5–4 mm²+4 x 25 mm²	63	1SPE007715F9705	41Z74	5/90
Terminal block screwless N 17 x 1,5–4 mm²+5 x 25 mm²	63	1SPE007715F9706	41Z75	5/70
Terminal block screwless N 20 x 1,5–4 mm²+6 x 25 mm²	63	1SPE007715F9707	41Z76	5/60
Terminal block screwless PE 5 x 1,5–4 mm²+1 x 25 mm²	63	1SPE007715F9712	41Z77	5/180
Terminal block screwless PE 8 x 1,5–4 mm²+2 x 25 mm²	63	1SPE007715F9713	41Z78	5/150
Terminal block screwless PE 11 x 1,5–4 mm²+3 x 25 mm²	63	1SPE007715F9714	41Z79	5/100
Terminal block screwless PE 14 x 1,5–4 mm²+4 x 25 mm²	63	1SPE007715F9715	41Z80	5/90
Terminal block screwless PE 17 x 1,5–4 mm²+5 x 25 mm²	63	1SPE007715F9716	41Z81	5/70
Terminal block screwless PE 20 x 1,5–4 mm²+6 x 25 mm²	63	1SPE007715F9717	41Z82	5/60

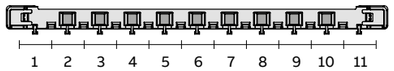

MISTRAL41 – Terminal block carriers

Description	Order code	Type number	Packaging
Terminal carriers			
Carrier 8M	1SPE007715F0751	41Z67	5/280
Carrier 12M	1SPE007715F0752	41Z68	5/225

MISTRAL41 – Terminal bars

Description	Order code	Type number
Terminal bars		
Terminal bar 5 holes D.4.5 mm	12531	41Z28
Terminal bar 10 holes D.4.5 mm and 3 holes D.5.6 mm	12532	41Z29
Terminal bar 16 holes D.4.5 mm and 3 holes D.5.6 mm	12533	41Z30
Terminal bar 15 holes D.4.5 mm and 6 holes D.5.6 mm	12534	41Z31
Terminal bar 19 holes D.4.5 mm and 6 holes D.5.6 mm	12535	41Z32

MISTRAL41 – Terminal bar carriers

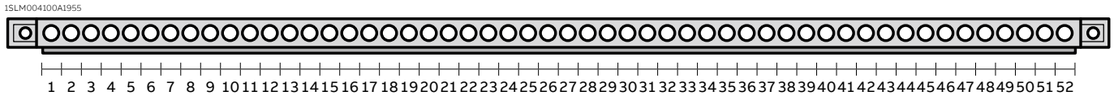

Description	Order code	Type number
Terminal carrier		
Carrier for 8 moduls	1SLM004100A1953	41Z25
Carrier for 12 modules	1SLM004100A1954	41Z26
Carrier for 18 modules	1SLM004100A1955	41Z27
