

Features

- Adjustable Output Voltage
- Non-Isolated
- 1-2AMP Adjustable Positive Step Down
- Integrated Switching Regulator
- Internal Short Circuit Protection
- ON/OFF Control(Ground Off)
- UL94V-0 Package Material
- Wide Input Range
- Efficiency to 96 %
- See Innoline Application Notes for use as an Inverter

Description

The R-6XXX series is a high performance 1.5V to 15V (18V), 1.1Amp to 2.0Amp, 12-Pin SIP (single in-line package) switching regulator. Synchronous rectification yields excellent efficiencies of up to 97%. Short circuit protection reduces the short circuit input current to under 50mA.

Notes:

- Requires a 100μF electrolytic or tantalum output capacitor for proper operation in all applications (the capacitor to be placed as close as possible to the output pins).
- ON / OFF pin can be driven by TTL (logic gate), open-collector bipolar transistor or open-drain MOSFET.
- Output Current vs. Input Voltage (see graph below).

Output Current vs Input Voltage

Max output current calculation:

Internal power dissipation
(1W) = Io x Vo x (1-Efficiency)
Io = 1(W) / Vo x (1-Efficiency)

Example : R-6212P

at Vin = 32VDC

Efficiency = 93% (see "Selection Guide" table)
Vo = 12VDC
Io = 1W / 12V x (1-0.93) = 1.19A

at Vin = 14VDC

Efficiency = 96% (see "Selection Guide" table)
Vo = 12Vdc
Io = 1W / 12V x (1-0.96) = 2.08A

Standard Application Circuit

Add a blocking diode to Vout if current can flow backwards into the output, as this can damage the converter.

Protection diodes are required for high capacitive loads.

Refer to R-5xxxA Datasheet (see Optional Diode Protection Circuit) for circuit suggestions.
