Description

The HSMx-C680 series of chip-type LEDs are designed to illuminate at a right angle to the direction of mounting. When mounted on a PC board, these devices will emit light in a direction parallel to the board.

The small 3.0 x 1.0 x 2.0mm footprint of the HSMx-C680 is designed for applications where space is limited. These devices are available in four colors and use untinted, non-diffused optics.

The HSMx-C680 series of parts are compatible with IR reflow soldering process only.

Notes:

1. The luminous intensity I_V is measured at the peak of the spatial radiation pattern which may not be aligned with the mechanical axis of the LED package.
2. The dominant wavelength, λ_d , is derived from the CIE Chromaticity Diagram and represents the perceived color of the device.
3. $\theta_{1/2}$ is the off-axis angle where the luminous intensity is $\frac{1}{2}$ the peak intensity.
