

The Millennium range shares the same physical characteristics as Nitech's X-Cell Rechargeable Handlamps which are probably the most successful rechargeable lighting products in the world and are used by Government Agencies, emergency services and industry. The Millennium range, however, offers an astounding four-fold increase in performance.

The Millennium 50 and Millennium 100 are general purpose rechargeable handlamps offering powerful light output and a continuous operating time of up to 30 hours and 20 hours respectively.

The Millennium 400 has an extremely high power beam of 400,000 candlepower and is suitable for security or similar specific situations where a very long range beam is required. This product has a continuous operating time of between 4.5 and 5 hours. The Millennium 400 is equipped with a secondary polycarbonate lens fitted into a rubber housing for total protection. An infrared lens is available as an alternative for situations where covert use is required.

Millennium Handlamps can remain on permanent charge and are not damaged by being left in a discharged state. In common with all Nitech handlamps they do not suffer from memory effect and can be charged from mains and vehicle.

	Mil50	Mil100	Mil400
Dimensions mm	210 x 124x 135		
Weight kg	1.5	1.5	1.6
Light output candlepower	50,000	100,000	400,000
Continuous operating time (hours)	28-30	18-20	4.5-5
Recharge time (fast charging available)	8-10 hours		
Product Life	Up to 3,000 recharges		
Operating temperature	-40 C to +60 C		
Level of environmental protection	IP66		

*A range of accessories is available*
