

The **Arduino Prototyping Shield** makes it easy for you to design custom circuits for your next Arduino project.

You can **solder parts** to the prototyping area to create your project, or use it with a small solderless breadboard (not included) to quickly test circuit ideas without having to solder. It's got extra connections for all of the Arduino I/O pins, and it's got space to mount through-hole and surface mount integrated circuits if you need to as well. It's a **convenient way to make your custom circuit** and Arduino into a single module.

Hundreds of thousands of Arduino boards are already fueling people
