

CABLELINE SOLO

NEW *skirting profile now available*

stylish and versatile trunking

STYLISH AND VERSATILE

MITA are specialists in the manufacture and supply of cable management systems, offering a wide range of single, twin and multi-compartment trunking systems for perimeter and other types of installation.

Where a smaller trunking profile is desired, but capacity is still a requirement, you need **Cableline Solo**. With dimensions of 150x52mm for dado and 175x52mm for skirting, Solo is a three compartment high impact thermoplastic trunking designed to give maximum capacity within a compact profile.

Integral clip-in dividers, which form the three compartments can be removed to form one large single compartment if required.

Clip on fittings aid ease of installation. An optional fixing bracket is available, where screw fixing is a requirement.

As with all other Cableline products, **Solo** is compatible with MITA's range of switch and socket boxes, designed to accept standard wiring accessories from a wide range of leading manufacturers.

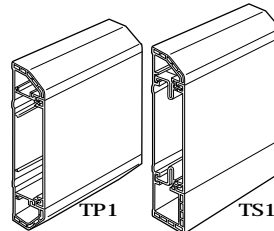

3 compartments under one lid - that's **Cableline Solo**.
