

LED Tester

ODT **Opto Device Tester Box**

The ODT allows simultaneous firing of Single, Bi, Tri and Quad Level Assemblies. Current selections of 2mA, 5mA, 10mA, 20mA, 30mA and 50mA are provided in an easy to use female dip socket. One 9V battery required.

SMD Kit

SMD KIT **Designer's LED Color Demo System**

The SMD Kit presents the designer with a unique view of the various industry standard and new styles of surface mount (SMD) LED devices available from BivarOpto. Each row can be viewed independently or at the same time to allow comparison and selection of the best LED type and color. The Kit includes the newest SMD devices, including the new large Pix-Tek™ SMD round and square domed SMD devices that display brilliant programmable colors. Demo kit operates on 9V battery (not included).
