

## Blow-moulded, double-walled cases

The blow-moulded case ranges have a double-walled construction, made from 100% recyclable polypropylene (PP), which creates an impact absorbing "air cushion", making the cases extremely strong and guaranteeing top product protection.

Thanks to the "all-in-one" manufacturing process, the cases have a reliable polypropylene (PP) "living-hinge" similar to that used in the motor industry for foot pedal mechanisms and tested to the most rigorous standards.

### **Outside, a tough shell. Inside, the perfect form.**

The double-walled construction enables the internal wall to be custom moulded around your products ensuring a perfect fit within the case interior. An ideal solution when, for example, products need to be cleaned after use or need an extra durable, secure presentation. With a wide range of standard sizes available, the custom moulded interior offers an extremely cost effective and professional solution.
