# Dual, 256-Tap, Volatile, Low-Voltage Linear Taper Digital Potentiometers

## General Description

The MAX5386/MAX5388 dual, 256-tap, volatile, low-voltage linear taper digital potentiometers offer three end-to-end resistance values of 10k $\Omega$ , 50k $\Omega$ , and 100k $\Omega$ . Operating from a single +2.6V to +5.5V power supply these devices provide a low 35ppm/ $^{\circ}$ C end-to-end temperature coefficient. The devices feature an SPI<sup>™</sup> interface.

The small package size, low supply voltage, low supply current, and automotive temperature range of the MAX5386/MAX5388 make the devices uniquely suitable for the portable consumer market, battery backup industrial applications, and the automotive market.

The MAX5386 includes two digital potentiometers in a voltage-divider configuration. The MAX5388 includes one digital potentiometer in a voltage-divider configuration and one digital potentiometer in a variable-resistor configuration. The MAX5386/MAX5388 are specified over an extended -40 $^{\circ}$ C to +125 $^{\circ}$ C temperature range and are available in 16-pin, 3mm x 3mm TQFN or 10-pin, 3mm x 5mm  $\mu$ MAX<sup>®</sup> packages, respectively.

## Applications

Low-Voltage Battery Applications  
Portable Electronics  
Mechanical Potentiometer Replacement  
Offset and Gain Control  
Adjustable Voltage References/Linear Regulators  
Automotive Electronics

**Functional Diagrams appear at end of data sheet.**

## Features

- ◆ Dual, 256-Tap, Linear Taper Positions
- ◆ Single +2.6V to +5.5V Supply Operation
- ◆ Low (< 1 $\mu$ A) Quiescent Supply Current
- ◆ 10k $\Omega$ , 50k $\Omega$ , 100k $\Omega$  End-to-End Resistance Values
- ◆ SPI-Compatible Interface
- ◆ Power-On Sets Wiper to Midscale
- ◆ -40 $^{\circ}$ C to +125 $^{\circ}$ C Operating Temperature Range

## Ordering Information

| PART         | PIN-PACKAGE  | END-TO-END RESISTANCE (k $\Omega$ ) |
|--------------|--------------|-------------------------------------|
| MAX5386LATE+ | 16 TQFN-EP*  | 10                                  |
| MAX5386MATE+ | 16 TQFN-EP*  | 50                                  |
| MAX5386NATE+ | 16 TQFN-EP*  | 100                                 |
| MAX5388LAUB+ | 10 $\mu$ MAX | 10                                  |
| MAX5388MAUB+ | 10 $\mu$ MAX | 50                                  |
| MAX5388NAUB+ | 10 $\mu$ MAX | 100                                 |

**Note:** All devices are specified over the -40 $^{\circ}$ C to +125 $^{\circ}$ C operating temperature range.

+Denotes a lead(Pb)-free/RoHS-compliant package.

\*EP = Exposed pad.

| Operating Temperature Range.....                      | -40°C to +125°C |
| Junction Temperature .....                            | +150°C          |
| Storage Temperature Range.....                        | -65°C to +150°C |
| Lead Temperature (soldering, 10s) .....               | +300°C          |

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS

(V<sub>DD</sub> = +2.6V to +5.5V, V<sub>H-</sub> = V<sub>DD</sub>, V<sub>L-</sub> = GND, T<sub>A</sub> = T<sub>MIN</sub> to T<sub>MAX</sub>, unless otherwise noted. Typical values are at V<sub>DD</sub> = +5V, T<sub>A</sub> = +25°C. ) (Note 1)

**Note 1:** All devices are 100% production tested at  $T_A = +25^{\circ}C$ . Specifications over temperature limits are guaranteed by design and characterization.

**Note 2:** DNL and INL are measured with the potentiometer configured as a voltage-divider (Figure 1) with  $H = V_{DD}$  and  $L = GND$ . The wiper terminal is unloaded and measured with an ideal voltmeter.

**Note 3:** R-DNL and R-INL are measured with the potentiometer configured as a variable resistor (Figure 1). DNL and INL are measured with the potentiometer configured as a variable resistor.  $H_{-}$  is unconnected and  $L_{-} = GND$ . For  $V_{DD} = +5V$ , the wiper terminal is driven with a source current of 400 $\mu A$  for the 10k $\Omega$  configuration, 80 $\mu A$  for the 50k $\Omega$  configuration, and 40 $\mu A$  for the 100k $\Omega$  configuration. For  $V_{DD} = +2.6V$ , the wiper terminal is driven with a source current of 200 $\mu A$  for the 10k $\Omega$  configuration, 40 $\mu A$  for the 50k $\Omega$  configuration, and 20 $\mu A$  for the 100k $\Omega$  configuration.

**Note 4:** The wiper resistance is the worst value measured by injecting the currents given in Note 3 in to W with  $L = GND$ .  $R_W = (V_W - V_{H-})/I_W$ .

**Note 5:** Drive  $H_A$  with a 1kHz GND to  $V_{DD}$  amplitude tone.  $L_A = L_B = GND$ . No load. WB is at midscale with a 10pF load. Measure WB.

**Note 6:** The wiper-settling time is the worst case 0 to 50% rise time, measured between tap 0 and tap 127.  $H = V_{DD}$ ,  $L = GND$ , and the wiper terminal is loaded with 10pF capacitance to ground.

**Note 7:** Digital timing is guaranteed by design and characterization, not production tested.

# Dual, 256-Tap, Volatile, Low-Voltage Linear Taper Digital Potentiometers

## Detailed Description

The MAX5386/MAX5388 dual, 256-tap, volatile low-voltage linear taper digital potentiometers offer three end-to-end resistance values of 10k $\Omega$ , 50k $\Omega$ , and 100k $\Omega$ . Each potentiometer consists of 255 fixed resistors in series between terminals H and L. The potentiometer wiper, W, is programmable to access anyone of the 256 tap points on the resistor string.

The potentiometers in each device are programmable independently of each other. The MAX5386/MAX5388 have an SPI interface.

### SPI Digital Interface

The MAX5386/MAX5388 include an SPI interface, which provides a 3-wire write-only serial data interface to control the wiper tap position through inputs chip select ( $\overline{CS}$ ), data in (DIN), and data clock (SCLK). Drive  $\overline{CS}$  low to load data from DIN synchronously into the serial shift register on the rising edge of each SCLK pulse. The MAX5386/MAX5388 load the last 9 bits of clocked data once  $\overline{CS}$  transitions high. See Figures 2 and 3. After all the data bits are shifted in, data are latched into the appropriate potentiometer control register when  $\overline{CS}$  goes from low to high. Data written to a memory register immediately updates the wiper position. Keep  $\overline{CS}$  low

during the entire data stream to prevent the data from being terminated.

The first bit A0 (address bit) addresses one of the two potentiometers; writing a zero in A0 addresses control register A and writing a one in A0 addresses control register B. See Table 1. The power-on reset (POR) circuitry sets the wiper to midscale (D[7:0] 1000 0000).

The 8 data bits (D7–D0) indicate the position of the wiper. For D[7:0] = 0000 0000, the wiper moves to the position closest to L. For D[7:0] = 1111 1111, the wiper moves closest to H. D[7:0] is 1000 0000 following power-on for both registers A and B.

**Register A:** The data byte writes to register A, and the wiper of potentiometer A moves to the appropriate position at the rising edge of  $\overline{CS}$ . D[7:0] indicates the position of the wiper. D[7:0] = 0000 0000 moves the wiper to the position closest to L. D[7:0] = 1111 1111 moves the wiper to the position closest to H. D[7:0] is 1000 0000 following power-on.

**Register B:** The data byte writes to register B, and the wiper of potentiometer B moves to the appropriate position at the rising edge of  $\overline{CS}$ . D[7:0] indicates the position of the wiper. D[7:0] = 0000 0000 moves the wiper to the position closest to L. D[7:0] = 1111 1111 moves the wiper to the position closest to H. D[7:0] is 1000 0000 following power-on.

**Table 1. SPI Register Map**

| Bit Number             | 1  | 2  | 3  | 4  | 5  | 6  | 7  | 8  | 9  |
|------------------------|----|----|----|----|----|----|----|----|----|
| Bit Name               | A0 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |
| Write Wiper Register A | 0  | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |
| Write Wiper Register B | 1  | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |

| 0                  | 4/09             | Initial release                                                                                                                                                                                                                                                         | —                |
| 1                  | 11/09            | Released MAX5386LATE+ and MAX5386NATE+ in <i>Ordering Information</i> ; corrected specifications for Full-Scale Error, Zero-Scale Error, and Integral Nonlinearity in <i>Electrical Characteristics</i> ; added I.C. row to <i>Pin Description</i> ; corrected Figure 1 | 1, 2, 7          |
| 2                  | 1/10             | Released the MAX5388LAUB+, MAX5388MAUB+, MAX5388NAUB+ + in <i>Ordering Information</i> .                                                                                                                                                                                | 1                |

Maxim cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim product. No circuit patent licenses are implied. Maxim reserves the right to change the circuitry and specifications without notice at any time.
