

950 SPKL/7B SM Magnetic L-key set, metric, BlackLaser

Hex-Plus

7-piece set. Wera Hex-Plus L-keys have a larger contact surface inside the screw recess. This reduces the notching effect and thereby also the deformation of the screwhead. At the same time up to 20 % more torque can be transferred. The ball-end on the long arm enables angled access to drive screws in awkward places. L-keys with a green thermoplastic sleeve (SPKL) are manufactured out of easy-to-grip, circular material. The sleeve ensures that work is safe and comfortable even at low temperatures. High corrosion protection features thanks to the special BlackLaser surface treatment. The size of each L-key has been engraved by a laser making it easy to find the right tool. The wear-resistant clip material ensures that the L-keys are securely held yet are easy to remove. For recessed screws, it's often advantageous for the screw to be held on the L-key by magnetic force. The Wera clips with magnetiser/demagnetiser enable a magnetisation/demagnetisation of L-keys in a flash.
