RI saturating type chokes change impedance at the moment of switching, and can be used to attenuate differential-mode noise or symmetrical interference as generated in fast switching high current applications. These chokes are typically used in conjunction with suppression capacitors. For optimum attenuation chokes must be connected as close as possible to the semiconductor switching device.

Features and benefits

- | Excellent thermal behavior.
- | Through hole or wire connections.
- | Single or dual-choke configurations.
- | Up to 25 A single configuration.
- | Custom-specific versions are available on request.

Typical applications

- | Suppressing high interference levels generated by fast switching circuits
- | DC voltage smoothing
- | EMC/EMI filters
- | Phase angle control circuits
- | Power supplies
- | Chargers
