The solarmonkey adventurer is the first Powertraveller solar charge to feature an internal battery which, in optimum light conditions, can be charged by the solar panels in just 8 to 12 hours. When adventurers finally stop after a day's exploring the solarmonkey adventurer can carry on charging itself and other devices efficiently in low light conditions thanks to the Maximum Power Point Tracker (MPPT) technology within it and, when the sun finally sets, the internal battery can also keep your devices powered through the night.

All Powertraveller products undergo extensive testing and the solarmonkey adventurer is no exception. Feedback from the company's most extreme brand ambassadors was really positive and they loved the bespoke travel case. This has been developed using toughened materials and includes integral fixings, straps and a carabiner so that the solarmonkey adventurer is well protected and can be firmly secured to a backpack to make the most of the day's sunlight to recharge the internal battery unit while on the go. There are also pockets within the case to hold your cables and tips.
