

LED LENSER® Automotive Rechargeable

Proving that great ideas are sometimes tiny this is a miniature rechargeable LED torch for use in the car. Not much bigger than a wheel locking nut it's a desirable gadget for any glove box. Simply connect the charger to the cigarette lighter and hey presto, you have an emergency source of bright white light. A 5mm performance diode inside a crystal lens casts a circular, shadow-free beam up to 13 metres. Ideal for those moments when available light makes it difficult to check a map, inspect a fault under the bonnet or walk up a dark pathway. A simple twist switch saves having to scramble around in the dark trying to turn on the light. The smart stainless steel body provides protection against drops, scratches or scrapes. Weight: just 44g. Supplied with a multi-adaptor for most car lighter sockets plus 4 Ni-Mh batteries.

As a leading international brand of hand-held torches and head lamps, LED Lenser is renowned for superior German engineering, outstanding performance, and state-of-the art technologies, such as the patented Advanced Focus System and Smart Light Technology. Constantly driving innovation to provide class-leading lighting instruments, LED Lenser is the brand of choice for professional tradesmen, emergency services personnel, search & rescue teams and serious outdoor enthusiasts. LED Lenser hand torches and head lamps deliver breath-taking, bright homogenous white light, that turns night into day and simply has to be seen to be believed. Using only the finest materials, such as energy-efficient CREE LED light chips, aircraft-grade aluminium and gold-plated contacts, they are renowned for quality and have a reputation for reliability that is second to none.
