Functional Diagram

General Description

The HMC348LP3 & HMC348LP3E are non-reflective GaAs MESFET SPDT switches in low cost leadless QFN surface mount plastic packages ideal for CATV applications. Covering DC to 2.5 GHz, the switch offers high isolation, low insertion loss, integrated 75 Ohm terminations and an "all off" state. The switch features >80 dB isolation at 5 MHz and >55 dB isolation up to 1 GHz. The switch operates using complementary positive control voltage logic lines of +5/0V and requires a +5V bias supply (Vdd). This switch offers excellent performance in both 50 Ohm & 75 Ohm systems for either SPDT or SPST functions.

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1	Vdd	Supply Voltage +5V $\pm 10\%$	
2, 4, 5, 6, 9, 12, 15, 16	N/C	These pins should be connected to PCB RF ground to maximize isolation.	
3, 7, 14	RFC, RF1, RF2	These pins are DC coupled and matched to 75 Ohms. Blocking capacitors are required.	
8, 13	ACG1, ACG2	External capacitors to ground are required. Select value for optimal isolation below 500 MHz.	
10	B	See truth table and control voltage table.	
11	A	See truth table and control voltage table.	

Application Circuit

The value of capacitors C1 & C2 are critical for low frequency isolation performance below 500 MHz. 3300 pF 0402 size capacitors are recommended for optimal isolation down to 5 MHz. If the frequency of operation is above 500 MHz then 100 pF to 300 pF 0402 capacitors will be sufficient.

[2] Circuit Board Material: Rogers 4350

The circuit board used in the final application should be generated with proper RF circuit design techniques. Signal lines at the RF port should have 50 ohm impedance and the package ground leads and package bottom should be connected directly to the ground plane similar to that shown above. The evaluation circuit board shown above is available from Hittite Microwave Corporation upon request.
