

# ELEV-8 Crash Pack

## Overview

The ELEV-8 Crash Pack contains the most commonly damaged components from a moderate crash. The motor mounts and landing gear were designed to protect your equipment and absorb the force on landing and during an unexpected collision. The Gem Fan propellers are a common piece of gear to break, and having extra in this kit are a good thing! From the conservative beginner to the risk taking ace, this pack will get you back up and flying in no time!
