

## ForceFlex™

The new Forceflex spectacle utilises a novel application of the very latest in plastics technologies that makes them almost unbreakable. The frame of the spectacle is able to recover from almost any deformation that it may receive from simply being left in the wearers pocket to being stood on. The frame is injection moulded around the lenses to ensure that they stay in place should a particle hit the wearer, fully protecting the eyes. The frames also feature the use of comfortable polymers where they touch the wearers skin ensuring both a secure and comfortable fit.

Exceeds EN166F by over six times.

- Thermoplastic Polyurethane (TPU) Frame is moulded around Hard Coated Lenses using a Patented Captive Injection System.
- Bonding the lens to the frame enables superior impact protection.
- The unique flexibility of the frame allows a Universal Fit for all head sizes it simply adjusts to fit.
- The properties of TPU mean the spectacle will withstand much harder levels of use, ideal for the toughest of Construction/Industry environments.
- Latest Sports Styling with co-polymer grip sidearms.
- Choice of Lens/Frame combinations to suit.
- Available from June 2008

ASA690-12M-000 Blue frame indoor/outdoor, clear hardcoat UV400 lens

ASA690-121-000 Translucent grey frame, clear hardcoat UV400 lens
