### Pipe Clips & Spacers

Talon

#### THE ULTIMATE PIPE CLIP & SPACER

Single pipe clips to fit 15, 22 & 28mm diameter pipe

Double pipe clips to fit 15 & 22mm diameter pipe

Self locking tops, tested to over 100 lbs. pull

Provides complete 360 degree pipe support & retention

Designed and manufactured in the UK, Talon Pipe Clips offer strong, secure and versatile fixing, ensuring optimum performance in all site conditions. Their unique design has made them one of the most successful and widely used fixings in the plumbing and heating industry.

The Talon Clip is designed to hold pipes firmly and safely in position as a temporary support during installation, with the locking top being clicked firmly and audibly into position when pipework is finally secured. Clips can be fixed either with No.8 or No.10 wood screws.

Additionally, the clips feature an interlocking dovetail, providing the facility to create multiple pipe runs of 3, 4 or more pipes in any combination of sizes, which are always parallel and evenly spaced.

Talon clips are manufactured from premium grade polymer, formulated for low temperature impact resistance and high temperature tensile strength, tested from minus 20 to plus 80 degrees C. The integral hinge moulded into the clip can be flexed more than a million times without breaking! This is due to the long chain molecular structure of the material.

#### THE TALON PIPE CLIP SPACER

Universal one size spacer increases wall clearance from 12 to 25mm

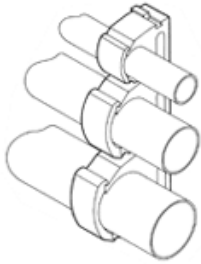

'stackable' providing even greater pipe wall clearance in 13mm increments

Allows quick and convenient fitting of pipework insulation as recommended in the Water Supply Byelaw Guide

The Talon Pipe Clip Spacer clips easily and directly to the base of all sizes of Talon Pipe Clip, increasing the pipe to wall clearance, thus providing sufficient space to apply lagging to the recommended thickness.

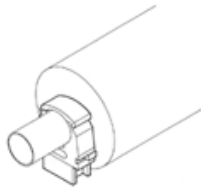

The Water Research Centre's Information and Guidance Note, (IGN) No. 9-02-02 Oct. 1998 recommends that, in order to comply with Water Byelaw 49, the minimum thickness of insulating material in unheated indoor applications should be 25mm on 15mm pipework and 19mm on 22mm & 28mm pipework.

Additional Spacers can be stacked to increase clearance to accommodate 32mm or 38mm thick insulation.

*Talon Clips can be easily interlocked into pairs or banks of 3 or more, in any combination of sizes.*

*Pipes are then always evenly spaced and the clips always in line.*

*Talon Clip Spacers are the most effective way of fitting pipework insulation, as required by Water Bye-law 49*
